LIST OF TABLES

2.1: Estimated Viral Hepatitis virus burden worldwide
2.2: Important characteristics of common hepatitis viral infections.
2.3: HAV genome organization and open reading frames
2.4 The relationship between age at infection and HBV chronicity.
2.5: Geographic distribution of the HBV genotypes
2.6a: Studies on HCV genotype from various regions of India
2.6b: Compilation of the large outbreaks of HEV reported till date
5.1. The sequences of the primers used for HBV genotyping were:
5.2. Reaction mixture for mix A:
5.3. Reaction mixture mix B:
5.4: Primer sequences for HAV PCR amplification-for VP3-VP1 region
5.5: Primer sequences for HAV PCR amplification-for VP3-VP1 region
5.6: Primer sequences for HAV PCR amplification-for VP1/2A region
5.7: Primer sequences for HCV PCR amplification-for 5’UTR region
5.8. Master mix for PCR amplification
5.9: Primers for HCV-5’UTR Core region
5.10. Primers for HEV detection by PCR
5.11. Restriction digestion reaction mixture set up
5. 12: Composition of PCR Reaction mixture for XRCC1/codon399 amplification
5.13: Restriction digestion reaction set up
5.14. Restriction digestion reaction mixture set up
6.1: Demographical, biochemical & serological profile of enrolled cases
6.2A. Distribution of enrolled cases with different viral etiologies based on age groups
6.2B. Distribution of enrolled cases with viral co-infection and non-viral etiologies based on age groups
6.3A: Serological, biochemical and viral DNA quantification data of the HBV infected cases
6.3B. Distribution of HBV genotypes in different stages of severity of HBV infected liver disease cases.

6.4: Distribution of wild-type and variant hoGG1 allele in control and hepatitis cases.

6.5: Distribution of wild-type and variant hoGG1 allele in control and all the stratified groups of liver disease cases with different viral and non-viral aetiology.

6.6: Distribution of wild-type and variant hoGG1 allele in control and cases of HBV infected different severity grade of liver disease cases.

6.7: Distribution of wild-type and variant hoGG1 allele in control and cases of alcohol related different severity grade of liver disease cases.

6.8: Distribution of wild-type and variant hoGG1 allele in control and cases of HAV related hepatitis with respect to different severity grade of liver disease cases.

6.9: Distribution of XRCC1 alleles in control and hepatitis cases.

6.10: Distribution of wild-type and variant XRCC1 allele in control and all the stratified groups of liver disease cases with different viral and non-viral aetiology.

6.11: Distribution of wild-type and variant XRCC1 allele in control and cases of HBV infected different severity grade of liver disease cases.

6.12: Distribution of wild-type and variant XRCC1 allele in control and cases of alcohol related different severity grade of liver disease cases.

6.13: Distribution of wild-type and variant XRCC1 allele in control and cases of HAV related hepatitis with respect to different severity grade of liver disease cases.

6.14: Distribution of Cyp2E1 genotype in control and hepatitis cases.

6.15: Distribution of wild-type and variant Cyp2E1 genotype in control and all the stratified groups of liver disease cases with different viral and non-viral aetiology.

6.16: Distribution of wild-type and variant Cyp2E1 allele in control and cases of alcohol related different severity grade of liver disease cases.

6.17: Presence of nitrite in different food products routinely consumed in Northeast India

6.18: Table showing the levels of 8-OH-dG in the different groups of liver disease cases and controls.
