ACKNOWLEDGEMENTS

At the outset, I record my deepest gratitude for Prof. R.S. Gupta and Dr. G.J.V. Prasad, my thesis supervisors, for their generosity and encouragement. I have been extremely fortunate, for they shaped my ideas by their invaluable suggestions and affection. Whenever I became confused, which happened quite often, their erudition and critical approach gave me the courage to go on. But for their encouragement, I would not have completed this work. They gave me the freedom to follow my often naïve ideas, and there were times when their advice confused me even more. But they were always accessible, to give me a patient hearing and goad me back on course.

Writing this thesis has not been an easy task. At the end of the day, however, because of the help I received from various quarters, it turned out to be a memorable experience. Whether in terms of intellectual input in the form of discussions and relevant materials, or in the form of financial support, I have had timely opportunities that enabled me to pursue this work. During my stay in JNU for the past nine years, my teachers have shaped my ideas and have provided encouragement to explore new and challenging avenues. I am thankful to Prof. Santosh K. Sareen, Chairperson, CLE (who has also been my supervisor at one stage), Prof. H.S. Gill, Prof. Kapil Kapoor, Prof. Anvita Abhi, Prof. Pramod Pandey, Prof. H.C. Narang, Prof. Makarand Paranjape, Prof. Vaishna Narang, Dr. Franson Manjali, Dr. Saugata Bhaduri, Dr. Navneet Sethi and Dr. Ayesha Kidwai for their help in shaping my concepts. Prof. B.N. Mallick of the School of Life Sciences, Dr. Chinmoy Mukhopadhyay, Special Centre for Molecular Medicine and Dr. D.K. Lobiyal, School of Computer and Systems Sciences have at various points given invaluable suggestions. Discussions with Prof. Anil Sadgopal, Prof. R.C. Sharma and Prof. Ramakant Agnihotri of Delhi University have been immensely helpful.

I take this opportunity to express my sincere thanks to Maj. Gen. T. Ravindranath (Retd.), then Director, Institute of Nuclear Medicine and Allied Sciences, Brig. R.P. Tripathi, Head, Division of Radiological Imaging and Bioinformatics, Dr. Subhash Khushu, Scientist-F and HRD Coordinator, NMR/INMAS for providing me the opportunity to undergo training and granting permission to use the fMRI facilities at INMAS. I am especially indebted to Dr. Khushu and Dr. S. Senthil Kumaran, Scientist-D, for providing institutional support, intellectual input and all possible help in the designing and conducting the study. Thanks to Uma Sreekumar for sharing her ideas and Pawan for initiating me to the MR scanner. Thanks to Ms. Shilpi Modi and Ms. Manisha for their help in data analysis.

I am also delighted to express my heartfelt gratitude for Prof. Dr. Peter Hagoort, FRS, Director, F.C. Donders Centre of Neuroimaging, University of Nijmegen, for his encouragement to explore the field of neurocognition when we met at Edinburgh. My thanks to Prof. Wolfgang Klein, Prof. Willem Levelt, Dr. Marianne Gullberg and Ms. Bhuvana Narasimhan of the Max-Planck Institut für Psycholinguistik, Nijmegen, and especially Prof. Stephen Levinson, Director of Max-Planck Institut für Psycholinguistik, Nijmegen and Prof. Jan Hulstijn of Universiteit van Amsterdam, for all the inspiration and encouragement. The discussions held with Dr. Gullberg at Edinburgh and numerous communications with Dr. Peter Indefrey, MPI, and later with Prof. Jacques Mehler and Prof. Alessandro Treves of SISSA, Trieste and with Prof. Dr. Daniela Perani, San Raffaele Institute, Milan, Prof. Michael Bate, FRS, and Prof. David Parker, of the University of Cambridge, were especially useful in hammering out many of the ideas contained in this thesis. All of them have contributed immensely to my research by sharing their innovative ideas with me without any hesitation, but my discussions with Michael at the International Centre for Theoretical Physics, Trieste have been especially useful. Many thanks to Prof. Giorgio Fillipi, Director, Scientific Programmes at ICTP, for inviting me to work as a Guest Scientist in one of the most stimulating scientific environments.

This research would not have been possible without adequate financial support. I gratefully acknowledge the financial assistance received from the Indian Council of Social Science Research (ICSSR) in the form of Doctoral Fellowship for a substantial period during the research. I thank Dr. R.R. Prasad, Director (Fellowships), Dr. A.P. Mangla, Dy. Director, Dr. U.C. Roy and Dr. R.C. Saxena, both Assistant Directors.
and Ms. Revathy Viswanath, Programme Officer, for taking care of every aspect of the Fellowship. This financial support also helped me to attend the 13th EuroSLA Conference at Edinburgh University. Research grant from Aga Khan Foundation, New Delhi, under the PESLE project to Gargi College during my tenure as Lecturer at the University of Delhi, is gratefully acknowledged. Thanks also to Unesco and IAEA for funding my trip to ICTP.

A work of such dimension is not possible without access to scholarly works in related domains of knowledge. In this, various libraries have helped me in various ways. No doubt, the largest repository for such material has been the JNU Central Library. Mr. L.N. Malik has been there to help me, as he has helped countless others, always with a smile on his face. Delhi University Central Reference Library, CIIL Library, University of Hyderabad Central Library, IIT Mumbai Library, TIFR Library, The British Library in New Delhi and National Brain Research Centre Library have given me the opportunity to use their facilities. I thank all of them: I am also indebted to the staff at the libraries of The University of Edinburgh, Heriot-Watt University and the ICTP Library for their cooperation and help.

Special acknowledgements to the volunteers for psycholinguistic tests and especially the volunteers who let me take a peek into their brains by undergoing fMRI scans. My students at Delhi University, whose ideas always provided the first impetus for many of the experiments in pedagogical practice, have been most helpful. I especially thank Gurpreet, Amita and Shveta who helped me collect the data on error analysis.

My friends and colleagues have provided tremendous encouragement. Dr. Rajnish Mishraji, now faculty member at JNU, Pradeep bhaiya, at Delhi University, and Udayji, with whom I have discussed almost all things from philosophy of language to possible ways of intervention for deficient learners, have contributed to my understanding about the nature of language itself. Tushar, Praveen, Rajnish, Haldhar, Sudhir, Vermaji, Binod, Chander, Roopa, Devesh, Vimal, Anurag, Anupam, Rajesh, Narayanjee, Nagendra, Jayanand, Ujjwal, Keshari and Sujit have been the sounding board of my ideas. I acknowledge the help of Ranjita and Yogesh in meticulously proofreading the manuscript and helping to compile the Bibliography and Index. I thank my juniors Pramod, Amit, Aniruddha and Bidisha for their help.

I have been extremely fortunate that my family always believed in me and supported me unconditionally in all the things that I have done. I thank them and sincerely apologise for not being with them at times of need.

Ritaji, Rawatji, Bhagwatiji and Karamchandji of CLE Office and Mr. Radhakrishnan and Mr. Tejpal of the SLL&CS Office deserve special mention for taking care of all official procedures and always being there to solve administrative problems.

My sister Kathakali and her Dell Inspiron 1150 have given logistic support at the critical final stages. She and Amrita have been my strongest critics and best friends, and I admire their unfailing help, without which it would have been impossible to bring this work to fruition.

For all errors and omissions, I take the sole responsibility.

11 July 2005, New Delhi

SHANTANU GHOSH
