List of figures

Title

Fig. 1.1 Schematic diagram of the structure of linguistic theory describing knowledge of language as an interlocking set of sub-theories consisting of principles and parameters

Fig. 1.2 Flow chart representing the operation of templates.

Fig. 1.3 Forms of linguistic information and the representation of reality

Fig. 1.4 Hierarchy of concept generation and combination

Fig. 1.5 Sequential processing stages in concept formation/acquisition

Fig. 1.6 Role of environment on L2 communication and learning

Fig. 2.1 Orders of application/levels of support for language curriculum design

Fig. 2.2 Initial curricular planning framework for teacher training

Fig. 2.3 AMEP Framework of Stages

Fig. 2.4 A preliminary model for ESL curriculum design

Fig. 2.5 Trajectories of progress: functional information linkages taught to the learners begin on the days indicated in parantheses for E1 (2), E2 (53), E3 (6), E4 (23)

Fig. 2.6 Day-wise ESL and content reading proficiency trajectories for the sample

Fig. 2.7 Stages of Curriculum Development, or the CD Process Lifecycle

Fig. 2.8 Steps in instructional delivery

Fig. 2.9 Performance variables for picture naming task. Panel a shows mean RTs (ms) and accuracy (%) in object naming task, and panel b shows the same results for action naming task for EAHP, LAHP and LALP subjects

Fig. 2.10 Mean RT (ms) for a picture task in which subjects produced (a) NPs of the type {def + N} configuration; (b) VPs of the type {inf + V} configuration

Fig. 2.11 (a) Mean RTs (ms) for a test in which subjects choose the phrase with correct structural-functional integrity from a choice of 2 probes; (b) indicate whether there is S-V agreement violation in presented structurally anomalous sentences; (c) indicate whether there is S-V agreement violation in presented functionally anomalous utterances

Fig. 2.12 A proposed model for language comprehension based on TRA

Fig. 3.1 Schematic diagram of experimental protocol for Experiment 4

Fig. 3.2 Motion correction parameters for one volunteer

Fig. 4.1 Serial two-system architecture of the lemma-based lexical theory: two stages of lexical selection followed by three stages of form encoding (adapted from Levelt, 2001)
