CHAPTER - 7

SCOPE FOR FUTURE WORK

The scopes for future research work on the developed composite material system are,

1. The secondary processing can be adopted on the unheat treated composites and to characterize mechanical and tribological properties

2. To evaluate the machining characteristics of the developed composites

3. To investigate the lubricated wear behavior of the composite

4. To study the high temperature behavior of tensile strength and tribological properties of Al 2618-TiO₂ composites.
