ACKNOWLEDGEMENT

At the outset I would like to acknowledge my biggest debt of gratitude to my guide, Dr. K. L. Handoo, Ph.D., FIC, C.Chem., FRSC (London), Reader, Post-graduate Department of Chemistry, University of Kashmir who suggested the stimulating topic for my research and then guided me throughout the research programme. Without his help in provoking my interest in the study and sustaining it by concretely backing the research work, it would have been difficult to complete this work.

I wish to express my sincere thanks to Prof. H. L. Girdhar, Head of the Department of Chemistry, University of Kashmir and Prof. M. M. Bokadia, former Head of the Department of Chemistry for taking a keen interest in the work and providing me with a great many facilities including those pertaining to laboratory etc.

My thanks are also due to Dr. D. N. S. Narayana, Professor, Indian Institute of Science, Bangalore for permitting me to work at the I.I.Sc., Bangalore where he was kind enough to provide me with adequate facilities.

I also express my thanks to my research colleagues, especially Miss Anju Koul who has been a constant source of encouragement to me.

I would like to put on record the sincerity and devotion with which Sh. P. L. Sapru prepared the manuscript in type for which I thank him.

My more than formal acknowledgement of debt is due to CSIR, New Delhi for the award of Junior Research Fellowship and Senior Research Fellowship without which this work could not have been possible.

Srinagar
