<tr>
<td>16.</td>
<td><strong>TABLE 16</strong>: Frequency and percentage of weak- (-70 to 70 LQ) and strong- (± 70 to ±100 LQ) handed, footed, eyed and eared in combined sample.</td>
<td>89</td>
</tr>
<tr>
<td>17.</td>
<td><strong>TABLE 17</strong>: Frequency and percentage of familial-sinistrality among left- and right-handed in combined sample.</td>
<td>89</td>
</tr>
</tbody>
</table>
18. TABLE 18: Frequency and percentage of familial-sinistrality among weak- and strong-handed in combined sample.

19. TABLE 19: Frequency and percentage of familial-sinistrality among male and female in combined sample.

20. TABLE 20: Frequency and percentage of self reported allergy, asthma, blood-pressure, sighting defects, learning disorder, migraine, nail biting, nervous weakness, skin disorders, stuttering, drug abuse among left- and right-handed in combined sample. TABLE 21: Frequency and percentage of self reported allergy, asthma, blood-pressure, sighting defects, learning disorder, migraine, nail biting, nervous weakness, skin disorders, stuttering, drug abuse among male and female in combined sample.

21. TABLE 21: Frequency and percentage of self reported allergy, asthma, blood-pressure, sighting defects, learning disorder, migraine, nail biting, nervous weakness, skin disorders, stuttering, drug abuse among male and female in combined sample.

22. TABLE 22: Frequency and percentage of self reported allergy, asthma, blood-pressure, sighting defects, learning disorder, migraine, nail biting, nervous weakness, skin disorders, stuttering, drug abuse among weak- and strong-handed in combined sample.

23. TABLE 23: Frequency of high-self-reporters-of-disorders (more than 2) and low-self-reporters-of-disorders (less than 2) between male and female among left- and right-handed in combined sample.

24. TABLE 24: Univariate analysis of variance for handedness and sex as factor variables and between-hand-measures as dependent variables in the combined, the first and the second sample.

25. TABLE 25: Univariate analysis of variance for handedness and sex as factor variables and within-hand-finger-length measures as dependent variables in the combined, the first and the second sample.

26. TABLE 26: Univariate analysis of variance for handedness and sex as factor variables and within-hand-finger-length-ratio measures as dependent variables in the combined, the first and the second sample.

27. TABLE 27: Univariate analysis of variance for handedness and sex as factor variables and within-finger-length-ratio measures as dependent variables in the combined, the first and the second sample.

28. TABLE 28 (a): Multivariate analysis of variance for handedness and sex as factor variables and hand measures as dependent variables in combined study—the multivariate test of Significance.
29. TABLE 28 (b): Multivariate analysis of variance for handedness and sex as factor variables and hand measures as dependent variables in combined study—the eigen values and canonical correlations.

30. TABLE 28 (c): Multivariate analysis of variance for handedness and sex as factor variables and hand measures as dependent variables in combined study—the discriminant analysis and the correlation between dependent and canonical variables.

31. TABLE 29: Mean and standard deviation of hand-measures for left- and right-handers in the combined, the first and the second sample.

32. TABLE 30: Mean and standard deviation of hand-measures for male and female in the combined, the first and the second sample.

33. TABLE 31: Mean and standard deviation of hand-measures for right- and left-handers among male and female in the combined, the first and the second sample (measures showing interaction effect are shown).

34. TABLE 32: Factor structure appearing out of principal component analysts of the hand measures (found to be related with handedness) after varimax rotation in the sample of 167 subjects(combined sample).

35. TABLE 33 (a): Correlations among the between-hand-measures: RL2D, RL3D, RL4D, RL5D, RLWIDD and RLWIDV, for male and female in the combined sample.

36. TABLE 33 (b): Correlations among the between-hand-measures: RL2D, RL3D, RL4D, RL5D, RLWIDD and RLWIDV, for male and female in the first sample.

37. TABLE 33 (c): Correlations among the between-hand-measures: RL2D, RL3D, RL4D, RL5D, RLWIDD and RLWIDV, for male and female in the second sample.

38. TABLE 34: t-test, mean and standard deviation of hand-measures for right- and left-handers in male and in female in the combined sample.

39. TABLE 35 (a): Univariate analysis of variance for the direction and the degree of handedness as factor variables and hand measures as dependent variables for female in combined sample.

40. TABLE 35 (b): Mean and standard deviation of hand-measures for weak- and strong-handed among left- and right-handers in female in combined sample.

41. TABLE 35 (c): Mean and standard deviation of hand-measures for left- and right-handers among female in combined sample.
TABLE 36: Univariate analysis of variance for footedness and sex as factor variables and hand measures as dependent variables in the combined sample.

TABLE 37: Univariate analysis of variance for eyedness and sex as factor variables and hand measures as dependent variables in the combined sample.

TABLE 38: Univariate analysis of variance for earedness and sex as factor variables and hand measures as dependent variables in the combined sample.

TABLE 39: Mean and standard deviation of hand-measures for left- and right-footed, eyed, and eared in the combined sample.

TABLE 40: Mean and standard deviation of hand-measures for right- and left-footed, eyed, among male and female in the combined sample (measures showing interaction effect are displayed).

TABLE 41: t-test, mean and standard deviation of the hand measure for hand-eye concordant and hand-eye discordant among male in combined sample.

TABLE 42 (a): Univariate analysis of variance for the age categories and handedness as factor variables and hand measures as dependent variables among female in combined sample.

TABLE 42 (b): Mean and standard deviation of hand-measures for below-21 years and above-21 years among female in combined sample.

TABLE 43 (a): Univariate analysis of variance for level of disorders and handedness as factor variables and hand measures as dependent variable.

TABLE 43 (b): The mean and standard deviation of hand measures for low- and high-disorder reporters in combined sample.

TABLE 43 (c): The mean and standard deviation of hand measures for low-reporters and high-reporters of disorders for left- and right-handers in combined sample.

TABLE 44: The frequency and percentage of subjects with Toe1>Toe2 and Toe1<Toe2 of left foot for the left- and right- handed among male and female in second sample.

TABLE 45: t-test, mean and standard deviation of foot lengths for right- and left-handers among female in second sample.

TABLE 46 (a): Univariate analysis of variance for footedness and sex as factor variables and foot measure: asymmetry in right and left foot length, as dependent variable in second sample.
56. **TABLE 46 (b):** The mean and standard deviation of right-left asymmetry in foot length (RLFOOTLN), for the left- and right-footed among male and female in second sample.

57. **TABLE 47:** t-test, mean and standard deviation of personality factors for aged<21 years and aged >21 years in combined sample.

58. **TABLE 48:** t-test, mean and standard deviation of personality factors for sample-I and sample-II taken from two different cities.

59. **TABLE 49 (a):** Univariate analysis of variance for handedness and sex as factor variables and personality dimensions as dependent variable among aged >21 years in combined sample.

60. **TABLE 49 (b):** The mean and standard deviation of personality dimensions for the left- and right-handed among male and female for aged >21 years in combined sample.

61. **TABLE 50 (a):** Univariate analysis of variance for footedness and sex as factor variables and personality dimensions as dependent variable for aged >21 years in combined sample.

62. **TABLE 50 (b):** The mean and standard deviation of personality dimensions for the left- and right-footed among male and female for aged >21 years in combined sample.

63. **TABLE 51 (a):** Univariate analysis of variance for eyedness and sex as factor variables and personality dimensions as dependent variable for aged >21 years in combined sample.

64. **TABLE 51 (b):** The mean and standard deviation of personality dimensions for the left- and right-eyed among male and female for aged >21 years in combined sample.

65. **TABLE 52 (a):** Univariate analysis of variance for earedness and sex as factor variables and personality dimensions as dependent variable for aged >21 years in combined sample.

66. **TABLE 52 (b):** The mean and standard deviation of personality dimensions for the left- and right-eared among male and female for aged >21 years in combined sample.

67. **TABLE 53:** Univariate analysis of variance for handedness and sex as factor variables and personality items as dependent variables for aged > 21 years in combined sample.
List of Figures

S.No. | Figures
--- | ---
1. | Figure 1a: Shows measures of dorsal fingers.
2. | Figure 1b: Shows ventral measures of fingers and palm.
3. | Figure 2: Stacked bar diagram showing percentage of weak and strong handers among left and right handers.
4. | Figure 3: Stacked bar diagram showing percentage of forced and not-forced handers among left and right handers.
5. | Figure 4: Clustered bar diagram showing left and right concordance in hand-foot, hand-eye and hand-ear preferences.
6. | Figure 5: Clustered bar diagram showing the frequency of left handedness, footedness, eyedness, and earedness among male and female.
7. | Figure 6: Stacked bar diagram showing the strong and weak preferences among handedness, footedness, eyedness and earedness.
8. | Figure 7: Stacked bar diagram showing percentage of familial sinistrality among left- and right-handers.
9. | Figure 8: Clustered bar diagram showing percentage of the incidence of disorders among left- and right-handers.
10. | Figure 9: Stacked line graph showing mean RL3D values among left- and right-handers in combined, first and second sample.
11. | Figure 10: Stacked line graph showing standard deviations of RL3D values among left- and right-handers in combined, first and second sample.
12. | Figure 11: Line-graph showing interaction between handedness and sex on RL4D asymmetry.
13. | Figure 12: Line-graph showing mean RWIDD and LWIDD values among left- and right-handers.
14. | Figure 13: Line-graph showing mean R2V4V ratio among left- and right-handers in combined, first and second sample.
Figure 14: Line-graph showing standard deviations of R2V4V ratios among left- and right-handers in combined, first and second sample.

Figure 15: Line-graph showing mean L2D2V ratio among left- and right-handers in combined, first and second sample.

Figure 16: Line-graph showing standard deviations of L2D2V ratios among left- and right-handers in combined, first and second sample.

Figure 17: Clustered-Bar diagram showing mean R2V4V ratio among male and female in combined, first and second sample.

Figure 18: Line-graph showing mean R5D5V and L5D5V ratios among left- and right-handers.

Figure 19: Line-graph showing interactions between handedness and sex on R3V4V ratios.

Figure 20: Line-graph showing interactions between handedness and sex on R3D3V ratios.

Figure 21: Scatter plot showing the regression relationship between RLWIDD and handedness.

Figure 22: Scatter plot showing the regression relationship between RL3D and handedness.

Figure 23: Error graph showing the 95% confidence interval of finger lengths: R3D, R4D, R5D, among right- and left-handers in female.

Figure 24: Line-graph showing mean values of RWIDD for strong- and weak-handers among left- and right-handers.

Figure 25: Clustered-Bar diagram showing mean values of LWIDD for right- and left-footedness, eyedness and earedness.

Figure 26: Scatter plot showing the regression relationship between RLWIDD and footedness.

Figure 27: Scatter plot showing the regression relationship between RLWIDD and eyedness.

Figure 28: Scatter plot showing the regression relationship between RLWIDD and earedness.
Figure 29: Error graph showing the 95% confidence interval of finger lengths: L2V, L3V, L4V, L5V, among hand-eye concordant and discordant in male.

Figure 30: Line-graph showing mean values of RWIDD for low- and high-disordered among left- and right-handers.

Figure 31: Clustered-Bar diagram showing mean R2D2V and R5D5V ratios among aged > 21 years and aged < 21 years.

Figure 32: Stacked-Bar diagram showing percentage of left- and right-handers having toe1 > toe2 and toe < toe2 among female.

Figure 33: Clustered-Bar diagram showing mean values of left- and right-foot length among left- and right-handers.

Figure 34: Line-graph showing interaction between handedness and sex on personality dimension of Neuroticism.

Figure 35: Clustered-Bar diagram showing mean values of personality-agreeableness and personality-conscientiousness among left-footed- and right-footed- male and female.

Figure 36: Clustered-Bar diagram showing mean values of extroversion among left- and right-handers in male and female.
