ACKNOWLEDGMENTS

It is really very difficult to put into words my gratitude for all those who directly or indirectly helped me in carrying out this work.

I sincerely thank my supervisor, Dr. Souravi Ghosh, who is responsible for every bit of Hybridoma Technology, I know today. To her, I am more of a friend than a student. I enjoyed working with her. In difficult situations, her helping attitude and affectionate behavior kept my morale high.

Prof. B. P. Talwar is the moving force behind all my achievements. Due to his continuous encouragement, suggestions, ideas and vision, one of the products from this work is licensed to Industry. I feel proud and honored to be one of his students.

I would also like to thank Drs. S. K. Gupta, Jyotika Kapur and Arvind Saxena for helping me during my initial years at NII. I owe my knowledge of immunoassays to Dr. K. D. Moudgil. The unique personality of Ayub, an ever helping friend, whose vast knowledge of immunology, always stood behind me continuously for more than six years even till today. Arunachalam, a perfectionist, is always a source of inspiration for me. I take this opportunity to thank all my FRIENDS without their love and affection this work couldn't be accomplished.

I have no words to express my feelings in return to my Doctoral Committee members, Drs J. C. Samantaray & Sarman Singh from AIIMS, New Delhi; Prof. B. S. Anand & Dr. A. K. Singal from GB Pant Hospital, New Delhi; for their guidance, critical evaluation of my work and also for providing the clinical material.

I thank Ms Sangeeta Bhaskar for transformation of dipstick dot-ELISA, an outcome of this work, into a kit form. I also thank Veenita, Jasjot, Yasmin & Anjali for encouragement and scientific discussions, Arunan for providing reagents and Drs. Rajesh Anand & Ramesh Juyal for providing animals. I appreciate Suresh Chandran's critical suggestions for the manuscript.

Dr. Sharon Reed was kind to accommodate me in her lab for a period of two months during last phase of my work at UCSD Medical Center, San Diego, USA, and provided all what was required for characterization of MABs.
Words are less to reciprocate the technical support provided by Sarin Saab, Shaji, Rampal, Raju, Manmohan, Srichand, Anil, Vijay Kumar, Shambhu, and Desraj without which this work would have never completed. I thank Mr. Sreekumaran Nair for statistical analysis of data and Mr. Rajeev Jain for printing of thesis. I also thank our artist Mr. Arora for his timely help, Mr. Babu Lal for photocopying and Mr. Gopal Basnotra for photography. I am indebted to academic cell, administration, finance and stores departments for their help.

I gratefully acknowledge the financial support from CSIR, New Delhi in the form of fellowship for first four years and later by NII.

This thesis is dedicated to my family members, particularly to my parents and uncle for their encouragement, love and affection.

MANOJ SHARMA
