1. INTRODUCTION 1
   1.1 Introduction
   1.2 Diagnosis
   1.2.1 Stool examination
   1.2.2 Serology
   1.3 Aims and objectives

2. REVIEW OF LITERATURE 6
   2.1 Historical overview of amoebiasis
   2.2 Epidemiology
   2.3 Biology and life cycle of Entamoeba histolytica
   2.4 Hosts
   2.5 Pathogenic and non-pathogenic strains
   2.6 Pathogenesis
   2.7 Clinical manifestations
   2.8 Chronic carriers
   2.9 Immune response during the disease
     2.9.1 Humoral immunity
     2.9.2 Cellular immunity
   2.10 Diagnosis
     2.10.1 Stool examination
     2.10.2 Serology
     2.10.3 Detection of antigen(s)
   2.11 Vaccine
3. MATERIALS AND METHODS

3.1 Materials

3.1.1 Mice

3.1.2 Entamoeba histolytica strains

3.1.3 Myeloma cell line

3.1.4 Media for E. histolytica culture

3.1.5 Cell culture materials

3.1.6 Chemicals

3.1.7 Reagents for electrophoresis

3.1.8 Plastic ware

3.1.9 Miscellaneous reagents

3.1.10 Clinical specimens

3.1.11 Preparation of buffers and other solutions

3.1.12 Medium for cultivation of E. histolytica

3.1.13 Preparation of cell culture media

3.1.14 Polyethylene glycol (PEG) solution

3.1.15 Substrate for plate-ELISA

3.1.16 Substrate for dot-ELISA

3.2 Methods

3.2.1 Maintenance of E. histolytica culture

3.2.2 Preparation of antigens

3.2.3 Harvesting clinical isolates of E. histolytica

3.2.4 Polyacrylamide gel electrophoresis

3.2.5 Generation of monoclonal antibodies against E. histolytica

3.2.6 Characterization of monoclonal antibodies
3.2.7 Purification of monoclonal antibodies by affinity chromatography

3.2.8 Coupling of antibodies to horse radish peroxidase

3.2.9 Standardization of sandwich enzyme immunoassay for detection of *E. histolytica* antigen(s)

3.2.10 Detection of antigen(s) in stool samples

3.2.11 Standardization of plate-ELISA for detection of anti-*E. histolytica* antibodies in ALA patients

3.2.12 Standardization of dipstick dot-ELISA

3.2.13 Standardization of method for use of finger prick blood in dipstick dot-ELISA

3.2.14 Follow-up of ALA patients for assessment of clinical improvement and study anti-*E. histolytica* class specific antibodies

4. RESULTS AND DISCUSSION

4.1 Generation and characterization of murine monoclonal antibodies to *E. histolytica*

4.1.1 Immunization & generation of hybridomas

4.1.2 Reactivity of MAbs in ELISA

4.1.3 Reactivity of MAbs in Western blot

4.1.4 Immunofluorescence and immunoagglutination

4.1.5 Conjugation of AC55 to HRP

4.1.6 Competitive ELISA

4.2 Sandwich ELISA for detection of *E. histolytica* specific antigen(s) in stool samples
4.3 Validation of sandwich ELISA

4.4 Dipstick dot-ELISA for diagnosis of amoebic liver abscess

4.5 Use of finger prick blood for dipstick dot-ELISA

4.6 Validation of dipstick dot-ELISA

4.7 Follow-up of ALA patients after successful treatment

5. SUMMARY
