ACKNOWLEDGEMENTS

The author with utmost pleasure places on record his heartfelt gratitude and profound indebtedness to Dr. R.K. Gupta, M.Sc., Ph.D. (Ex-Head, Division of Plant Animal Relationship, Indian Grassland and Fodder Research Institute), Principal Scientist (Nutrition and Biochemistry), Directorate of Pulses Research, Kanpur, for his invaluable guidance and constant help, supervision and encouragement, without which this work would have never been accomplished.

The author is highly indebted to Dr. Panjab Singh, Director, Indian Grassland and Fodder Research Institute, Jhansi, for unhesitatingly providing all incentives, facilities, encouragement and support for uninterrupted execution of programme of work.

The author is very grateful to Dr. A.S. Gill, Dr. J.N. Gupta, Shri M.M. Roy and Shri G.P. Nigam for supply of plant materials; Dr. S.K. Nigam (National Botanic Research Institute, Lucknow) for kindly providing facilities for amino acid analysis, fatty acid composition and some of the spectral data; Shri K.S. Ramachandra for assistance in trace element analysis; Dr. B.K. Bhadoria for valuable suggestions and helpful criticism during preparation of thesis, and to Shri P.B. Nair for painstakingly typing out the manuscript.

The author deeply reveres the unfailing love of his parents and thanks his family for immense moral strength during the course of arduous research investigations.

S.C. Gupta
