ACKNOWLEDGEMENTS

Writing the acknowledgements for the wonderful people who have contributed in completing this assignment is proving to be most difficult part of writing this thesis. The feelings are too intense and the ability of language and the space are too small. The words used here will never be able to describe the feelings I have for them.

First of all I would like to express my sincere gratitude to my supervisor Prof. Yogendra Singh. His supportive advice, constructive criticism and explanations of complex things in simplified manner have greatly helped in completing this task. While he gave me freedom to pursue whatever I wanted, he was always there when ever I needed. Working in his group gave me an opportunity to understand a wide range of advanced topics beyond my research focus. The lab trips for movies and lunch, both out side or at his home, have always been a fun.

I owe a lot to my co-supervisor Dr. Souvik Maiti for both my professional and personal growth. His encouragements to take this interdisciplinary research, his logical approach and analytical thinking to address problems, always supportive nature and fighter attitude have contributed immensely in development of confidence and independence in me. I am lucky to have this experienced young man always stand besides me whenever I needed. Besides my guide, he is like a friendly elder brother to me, to whom I can always go back without hesitation, even after fighting, for both personal and professional problems.

I am equally grateful to my "boss in law" Dr. Beena Pillai for taking personal interest in teaching me so many things, right from MS Office to complex microarray data analysis, deciphering gene interaction networks and pathways. I could always take her help whenever decision making was difficult. While scientific discussions with her were always thought provoking, time spent at her home was heart warming. Always open doors of her home and her caring nature had been a boon during this period of being away from own home.

I acknowledge Prof. Samir K. Brahmchari, DG CSIR, former Director, IGIB and Dr. K. C. Gupta, Acting Director, IGIB for creating infrastructure and conducive environment for the successful completion of the work.

I also thank all administrative and supporting staff for smooth running of the facilities.

I also acknowledge other faculties in IGIB especially Dr. Sohan Modak, Dr. V. C. Kalia, Dr. Munia Ganguly, Dr. Sridhar Sivasubbu and Dr. Mitali Mukherjee for technical support and thought provoking discussions.

I am grateful to Dr. Taposh K. Das, AIIMS, New Delhi, Dr. Tarun Kumar Mandal and Dr. Amitabha Sarkar IACS Kolkata and Dr. Jayachandran N. Kizhakkedathu UBC, Canada for carrying out some experiments and providing polymers and nanoparticles which has been very helpful in completing this work.

It is an oppourtunity to acknowledge the brilliant, intelligent, and above all, great individuals of my both the labs. I convey my heartfelt thanks to my past and present labmates of 208: Dr. Anita Aggrawal, Dr. Kirti Sharma, Dr. Adesh Saini, Dr. Reena Saini, Dr. Renu Baweja, Dr. Saif Zaman, Dr. Gyanendra Prakash Dubey, Dr. Azeet Narayan, Dr. Preeti Sachdeva, Dr. Abid Mattoo, Dr. Pawan Wadhwa, Dr. Meetu Gupta, Raj Kurupati, Assani, Andaleeb, Gunjjan, Richa and Preetida. I also convey my gratitude to past and present lab members of 303A: Mani, Amit, Bala, Harleen, Saurabh, Vaibhav,
Tani, Hemant and Dr. Santhiya. My interactions with these people have definitely improved my understanding of life in general and science in particular.

Upendra has been a great support in doing preparatory work for various experiments.

My heartfelt thanks to Niti for her constant support from the day I was struggling to use MS excel. Her emphasis to be optimistic, balance life and her considerate presence in those tough times when I needed someone to calm down or vent out my anger are invaluable.

I would also like to acknowledge my batch mates of PhD batch 2004 and other friends at IGIB especially Prashant, GP, Mridula, Kshitiz, Arif, Dr. Azeem, Lizo, Tanay, Amitabh............... for “Satsangati”.

I express my heartfelt thanks to my batch mate and friend Manoj, for his help in computational work.

My special thanks to Dr. Vinod Scaria, my batch mate and my room mate of last four years. His positive criticisms during initial days of my PhD and care whenever I was unwell were very helpful.

I also thank Mr. Sunny Chopra for his patience and hardwork in formatting the thesis. Without him it would have been difficult to present thesis in this form.

Words would be little to express my feeling and gratitude for my family. The constant unconditional support, love and patience of Abba and Amma have allowed me to keep going for whatever I wanted. My loving brother Pintoo has always come forward to take all those responsibilities happily which I should have been sharing with him. This allowed me to take challenges without bothering my family responsibilities. I can forget anything and everything just by talking to Gudia and Danish. The value of their contribution can only be felt in heart and no express in words. Their firm belief in me has always been a motivation to achieve newer heights.

At last I apologize to those whom I could not mention here. It is my lack of ability to express my feelings and not their sincerity and contribution for their names being left.

Jameel Ahmad Khan
