List of Figures

CHAPTER 1

Figure 1.1: The two components of asthma; airway inflammation and airway remodeling.

Figure 1.2: Mechanism of allergic airway inflammation characteristic of asthma.

CHAPTER 3

Figure 3.1: The workflow of GoldenGate assay.

CHAPTER 4 (SECTION 4.1)

Figure 4.1.1: Schematic diagram of the auto-regulation and cross-regulation among TH1/TH2 genes selected for the study.

CHAPTER 4 (SECTION 4.2)

Figure 4.2.1: Pair-wise linkage disequilibrium (LD) among the SNPs (Gene-wise).

Figure 4.2.2: Allelic test p-values of 253 SNPs in family based (A) and case-control (B) analysis.

Figure 4.2.3: Frequency distribution of the alleles (a) and genotypes (b) of the rs2069832G/A polymorphism among cases (n=139) and controls (n=194).

Figure 4.2.4: Frequency distribution of the alleles (a) and genotypes (b) of the rs3733475 C/A polymorphism among cases (n=139) and controls (n=194).

Figure 4.2.5: Frequency distribution of the alleles (a) and genotypes (b) of the rs1861494 A/G polymorphism among cases (n=139) and controls (n=194).
Figure 4.2.6: Frequency distribution of the alleles (a) and genotypes (b) of the rs3776944 G/A polymorphism among cases (n=139) and controls (n=194).

Figure 4.2.7: Frequency distribution of the alleles (a) and genotypes (b) of the rs1400656 A/G polymorphism among cases (n=139) and controls (n=194).

Figure 4.2.8: Frequency distribution of the alleles (a) and genotypes (b) of the rs2012075 A/G polymorphism among cases (n=139) and controls (n=194).

Figure 4.2.9: Frequency distribution of the alleles (a) and genotypes (b) of the rs1805011 A/C polymorphism among cases (n=139) and controls (n=194).

Figure 4.2.10: Frequency distribution of the alleles (a) and genotypes (b) of the rs324011 G/A polymorphism among cases (n=139) and controls (n=194).

Figure 4.2.11: Promoter region SNPs in IRF2 gene show association with asthma in sliding window haplotypic analysis.

Figure 4.2.12: The frequency distribution of the haplotypes of IFNG gene for the cases (asthmatics; n=139) and control (Non-asthmatics; n=194).

Figure 4.2.13: The frequency distribution of the haplotypes of IL-6 gene for the cases (asthmatics; n=139) and control (Non-asthmatics; n=194).

Figure 4.2.14: The frequency distribution of the haplotypes of STAT4 gene for the cases (asthmatics; n=139) and control (Non-asthmatics; n=194).

Figure 4.2.15: The frequency distribution of the haplotypes of IFNGR2 gene for the cases (asthmatics; n=139) and control (Non-asthmatics; n=194).

Figure 4.2.16: The frequency distribution of the haplotypes of STAT6 gene for the cases (asthmatics; n=139) and control (Non-asthmatics; n=194).
Figure 4.2.17: The frequency distribution of the haplotypes of *IL4RA* gene for the cases (asthmatics; n=139) and control (Non-asthmatics; n=194).

Figure 4.2.18: Analysis of the binding of nuclear proteins to *A* and *G* allele of *IFNG ss2 A > G* polymorphism by EMSA.

Figure 4.2.19: Analysis of the differential binding (affinity) of nuclear proteins to *A* and *G* allele of *IFNG ss2 A > G* polymorphism.

CHAPTER 4 (SECTION 4.3)

Figure 4.3.1: Summary of the general steps involved in implementing the MDR method.

Figure 4.3.2: Summary of the general steps involved in implementing the MDR-PDT algorithm with cross validation (CV).

Figure 4.3.3(A): MDR two locus model. Graphical representation/summary of multi-locus interactions between rs3827693 (*HSPH1*) and rs3790558 (*IL-12RB2*).

Figure 4.3.3(B): MDR three locus model. Graphical representation/summary of multi-locus interactions between rs3827693 (*HSPH1*) rs3790558 (*IL-12RB2*) and rs6542833 (*INPP4A*).

Figure 4.3.4: Interaction dendrogram for the markers for the markers tested in the MDR analysis for association with asthma.
