ACKNOWLEDGEMENT

The satisfaction and euphoria that accompany the successful completion of any task would remain essentially incomplete should one fail to mention the people whose constant guidance, support and encouragement helped to crown all the efforts with success.

To put emotions on paper is incredible difficult: words can hardly express my deep sense of gratitude, which I owe to my esteemed and reverend teacher Dr. S.K. Agarwala, Principal Meerut College, Meerut, India. Under whose able guidance, I have an opportunity to work. His ocean of knowledge and vast wisdom incessantly helped me to execute, compile and present this dissertation.

It gives me immense pleasure to express my deep sense of reverence and gratefulness to Dr. Rakesh Kapoor, H.O.D. Chemistry Department, Meerut College, Meerut for providing the research facilities. I am also thankful to other faculty members of Department of Chemistry, Meerut College, Meerut for their kind co-operation.

I convey my heartiest thanks to my parents, Mr. B.K. Maheshwari & Mrs. Anita Maheshwari and my parents-in-law Mr. J.P. Sharda and Mrs. Usha Sharda who have been the source of inspiration. Their warm affection, moral support and encouragement during thick and thin of whole endeavour proved to be a blessing in disguise for me. Last but not the least, I express my deepest feelings to my husband Mr. Vivek Sharda.

(Ruchika Sharda)
