Chapter 1: General Introduction

1.1 Introduction	1
1.2 Definition and Subdivision of Lectin	3
1.3 Occurrence and Distribution	6
1.4 Physicochemical Properties	8
1.4.1 Composition	8
1.4.2 Metal Ion Requirements	10
1.5 Biological role	12
1.6 Applications	13
1.7 Structural aspects	17
1.7.1 The background	17
1.7.2 Jelly roll lectins (Legume lectins)	20
1.7.2.1 Primary structure	23
1.7.2.2 Secondary and tertiary structures	23
1.7.2.3 Quaternary structure	25
1.7.2.4 Lectin-sugar interactions	28
1.7.3 Cereal lectins	32
1.7.4 β -Trefoil lectins	33
1.7.5 β -prism II fold lectins	35
1.7.6 β -prism I fold lectins	36
1.8 Crystallization	37
1.9 Plan of the work	37

Chapter 2: Materials and Methods

2.1 Introduction	39
2.2 Materials	39
2.3 Red blood cells	40
2.3.1 Trypsinised erythrocytes	40
2.4 Purification of SPL	40
2.5 Ammonium sulphate fractionation	41
2.6 Dialysis of ammonium sulphate fraction	42

2.7 Ion exchange chromatography	42
2.7.1 Standardization of ion exchange chromatography	42
2.7.1.1 Standardization of pH	42
2.7.1.2 Standardization of elution buffer	43
2.8 Purification by affinity chromatography	44
2.8.1 Activation of Guar Gum	44
2.8.2 Affinity chromatography	44
2.9 Iso electric focusing (IEF)	44
2.10 Sodium dodecyl sulphate polyacrylamide gel electrophoresis	45
2.10.1 Reagents for SDS-PAGE	45
2.10.2 Procedure	48
2.11 Matrix-Assisted Laser Desorption/Ionization mass spectroscopy	49
2.12 Protein estimation	49
2.12.1 Lowrys Method	49
2.12.2 Preparation of alkaline copper	49
2.12.3 Procedure	49
2.13 Hemagglutination Tests	50
2.14 Biochemical and biophysical characterization of SPL	50
2.14.1 Estimation of total sugar content	50
2.14.1.1 Materials	50
2.14.1.2 Procedure	51
2.14.2 Sugar inhibition studies	51
2.14.3 Temperature stability studies of SPL	52
2.14.4 pH dependant studies of SPL	52
2.14.5 Effect of denaturing agents	53
2.14.6 Metal ion requirement	54
2.14.6.1 Atomic absorption spectroscopy for metal ion detection	54
2.14.6.2 Metal ion requirement of SPL	55
2.14.7 Antifungal property of SPL	56
2.15 Fluorescence studies of SPL	56
2.15.1 Introduction	56
2.15.2 Unfolding studies	58
2.15.2.1 Guanidine hydrochloride induced denaturation	59
2.15.2.2 Urea induced denaturation	59
2.15.2.3 Quenching studies.	59
2.16 Circular dichroism studies of SPL	60
2.16.1 Circular dichroism	60
2.16.2 Determination of protein secondary structure by Circular Dichroism	61

2.16.3 Information about protein tertiary structure from Circular Dichroism	62
2.16.4 Demonstrating comparability of conformation	63
2.16.5 Experimental procedure	64
2.17 Crystallization and x- ray structure determination	64
2.17.1 Crystallization	64
2.17.2 Data collection	66
2.17.3 Data Processing	68
2.17.4 Mathew's number	68
2.17.5 Structure solution	69
2.17.6 Molecular replacement (MR)	69
2.18 Structure refinement	72
2.18.1 Refinement and model building	72
2.18.2 CCP4 program suite	73
2.18.3 Rigid body refinements	74
2.18.4 Restraint refinement	75
2.18.5 Omit maps	76
2.18.6 Refinement by maximum-likelihood method	76
2.18.7 Graphics, visualization, electron density maps and model building	77
2.18.8 Analysis and comparison of structures	79
2.18.9 Hydrogen bonds	80
2.18.10 Figures	81

Chapter 3: Results

3.1 Introduction	82
3.2 Purification of SPL	83
3.2.1 Ammonium sulphate fractionation	83
3.2.2 Ion exchange chromatography	83
3.2.3 Affinity chromatography	84
3.3 Characterization of lectin	84
3.3.1 Iso electric focusing	84
3.3.2 SDS-PAGE	87

3.3.3 MALDI-ToF mass spectrum analysis of SPL	88
3.4 Estimation of sugar	89
3.5 Sugar inhibition studies	89
3.6 Metal ion binding of SPL	91
3.7 Effect of metal ions	92
3.8 Effect of temperature on lectin activity	92
3.9 Effect of pH on lectin activity	93
3.10 Effect of denaturing agents	94
3.11 Antifungal activity	94
3.12 Fluorescence studies of SPL	95
3.13 Circular dichroism studies of SPL	99
3.14 Crystallization	101
3.15 Data collection and processing	102
3.16 Structure solution	106
3.16.1 Molecular replacement-MOLREP	106
3.16.2 Rigidbody refinement	106
3.16.3 Restraint refinement	107
3.16.4 Final refinement	107
3.17 Crystal structure of SPL	110
3.17.1 Primary structure	110
3.17.2 Secondary structures	115
3.17.3 Tertiary Structure	117
3.17.4 Metal binding sites	119
3.17.5 N-Glycosylation sites	122
3.17.6 The Quaternary Structure	123
3.17.7 Buried surface area	126
3.17.8 Solvent structure	129
3.17.9 Crystal packing	130

Chapter 4: Summary and Conclusion

4.1 Summary and Conclusion	134
----------------------------	-----

Appendix I

A.1 Protein crystallization	138
A.1.1 Principle of Protein Crystallization	138
A.1.1.1 Materials and Methods	138
A.1.1.2 Crystallization Methods	142
A.1.1.3 Crystal Handling, Mounting, Cooling, Storage and Transportation	146
A.1.2 X-rays Diffraction	148

A.1.2.1 Proteins, Crystals and X-rays	148
A.1.2.2 Bragg's Law	149
A.1.2.3 Asymmetric Unit, Space Group, Unit Cell and Bravais Lattices	150
A.1.3 X-ray diffraction Data Collection	155
References	
Appendix II	
A.2.1 PDB Entry	159
A.2.2 Sequence Deposition	159
References	160
