ACKNOWLEDGEMENTS

It is with a profound sense of gratitude that I offer this compilation of words as my homage at the divine lotus feet of Bhagwan Sri Satya Sai Baba.

I consider it a great privilege to be a student of Prof. K. V. A. Ramaiah who introduced me the fascinating and enthralling world of “Translational Control”. I am ever grateful to my professor who has been very helpful and responsible for threading my thoughts into practical shape and worked with me in unison. The fact that this thesis has been completed is mainly because of his constant encouragement, support and meticulous supervision of my work.

I thank Prof. T. Suryanarayana, Dean, School of Life Sciences and Head, Department of Biochemistry for providing the necessary infrastructure.

I like to thank Prof. Subba Rao, Prof. Ramanadham, Prof. Mithra, Dr. Shivakumar, Dr. Anand kumar and Dr. Setty for their indispensable help.

I am grateful to Dr. Abani Bhuyan, Department of Chemistry for his unflagging encouragement and guidance on in vitro caspase assays.

I am very much thankful to our collaborator in Indo-Israel joint project, Prof. Raymond Kaempfer of Hebrew University, Israel for his generous hospitality and guidance during my work in his laboratory. I am indebted to him for providing the chimaeric mRNAs. My particular gratitude goes to Mrs. Kaempfer, Mrs. Yona banai and Ika who were very helpful, amicable and made my stay in Israel happier.

I thank Prof. Bryan Williams, Cleveland Clinic Foundation, U. S. A. for providing the PKR-GST construct. I wish to thank Dr. Krishna of Prof. Wek laboratory, Indian University, Indianapolis, USA for his valuable gift of PKR and K3L proteins.

It was a great pleasure working with my lab mates, Dr. Sudhakar, Rajashekar, Hussain, Aparna and Rajesh. My special thanks goes to Rajashekar,
and Hussain for their sociable and affable nature and invaluable help. I appreciate Samba Murthy, Satyam, Murthy and Lallan Prasad for their assistance.

I ineffably thank all my friends in School of Life Sciences especially Chandu, Nagabushana, Bhaskar, Ravi, Markandeya, Mahipal, Hafiz, Rajgopal, Srinath, Hari, Zeenath, Kalavathi, Arun, Radha, Ruksana, Srikanth, Shivram, Sriram, Jadeshwar, Apparao, Madhava Reddy, Maya, Narsimharao, Rajendrakumar, Ramkumar and Vinay & also Laxman, Venu, Damayanthi, Laxmigayathri, Praveen Reddy, Arifuddin, Ramesh, Hanmantharao, Naveen and Praveen.

I am quite thankful to my wife Gyani kiran for her constant encouragement and timely help in scheming this thesis. I am very grateful to my brothers B. Venkataramana Gupta, B. Narsinha gupta and B. Ramesh gupta and my sister-in-law Mrs. B. Sujatha for their enduring patience and for taking care of our mother. I am also thankful to my in-laws Dr. G. Ambadas and Mrs. G. Sujatha for their constant support. I like to thank my uncle G. Kashinatham and cousins B. Srinivas, B. Srikanth, B. Srinath. I am greatful to Dr. Rangarao and Dr. Prasadarao for their constant encouragement. I take this opportunity to thank all my teachers, Prof. Bhiravamurthy, Dr. Krupanidhi, Dr. Basavaraju, Dr. Anilkumar, Dr. Vijayakumar, Dr. Venkateshwar Rao, Dr. Kantilal and Dr. Bhaskar.

I wish to acknowledge UGC, New Delhi for financially supporting me in the form of JRF and SRF for four years. I also like to acknowledge the travel grant provided by DST, New Delhi to visit and carry out research in Prof. Raymond Kaempfer laboratory in Israel as a part of Indo-Israel Joint Project.

Burela Laxminarayana.
