Acknowledgements

This dissertation could not have been written without the guidance and blessings of Dr S Ganapathy who not only served as my supervisor but also encouraged and challenged me throughout my research program. He opened his heart, the lab and his home for me so that I could learn. From him, not only did I learn the nuances of solid state NMR but also an attitude of service to society that has few parallels in the research world. His total acceptance of me as I am leaves me a humbler person and has been instrumental in carrying forward this Guru – disciple relationship to its fruitful end. I spent many a memorable day at his home discussing NMR. His wife and daughters accompanied us on several occasions to NMR gatherings making life in the NMR lab more home than another office. It is with a sense of remorse that I realize that I will no longer be meeting Dr Ganapathy on an everyday basis.

I am extremely grateful to Dr S Sivaram, Director, NCL for mentoring me during my stay at NCL. I am grateful to Dr Ravikumar for making the introduction to Dr S Ganapathy.

I thank the staff of the NMR group Mr PM Suryawanshi, Ms UD Phalgune, Mr KD Deshpande, Mr VT Sathe, Dr TG Ajithkumar, Dr PR Rajamohan, and Prashanth Mane for discussions and help rendered without a sense of any obligation.

Dr SR Gadre and the Theoretical Chemistry Group gave me invaluable help on computational chemistry and I thank the TCG for introducing me to the world of mathematical theory in chemistry.

I am also very grateful to Prof. Jean-Paul Amoureux, Prof. Sylvain Cristol and Prof. Jean Francois Paul, Laboratoire Catalyse, Universite Lille 1, for having hosted me in 2004 on a co-tutelle scholarship at the Universite des Sciences et Technologies, Cite Scientifique, Lille, France. This period helped me get invaluable exposure to methods and mechanics of computational chemistry. The tools I learnt here were helpful to me in understanding the computational packages I used earlier and later in understanding the computational theory that went with them. Prof JF Paul and Prof S Cristol spent many
hours with me explaining the nuances of computations that greatly enriched my experience. My friends in Lille – Dr NV Giridharan, Vinay, Sachin, Ashish, Joe, Devaki, Sumita, Pascal, Karim, Stephane, Severine, Sylvain and Rev Roy Farrar, Christ Church Lille. You were very helpful in acclimatizing to a different cultural experience.

I thank Prof. Mangala Sunder Krishnan, IIT Chennai and Prof Shimon Vega, Weizmann Institute, Rehovot for their valuable lectures, discussions and time which helped me to learn NMR theory.

My labmates Damodaran, Anuji, Raina, Sachin, Pratiksha, Ganesh, Yamini, Rupali, Padmaprasad, Vishwanathan, Mamta, Abhilash (and the list goes on) have made my stay well worth the while in NCL. Srividya Ganapathy helped me out with calculations and figures when I was pressed for time and when I most needed help.

My family lovingly gave me freedom, material and moral support to my choice of career and life style. I am grateful to His Holiness Sri Sri Ravi Shankar, One World Family of The Art of Living Foundation and World Alliance for Youth Empowerment.

in gratitude,

Gurpreet
