LIST OF TABLES

Table 1.1: List of countries with the highest numbers of estimated cases of diabetes for 2000 and 2030

Table 1.2: Proposed criteria for screening and diagnosis of diabetes

Table 3.1: Glycation modifications with mass increase (ΔM) for different AGEs

Table 3.1: Characteristics of plasma samples used for 2DE, western blot, and LC-MS analysis

Table 3.2a: Glycated protein identification by LC-MS analysis from mice plasma samples

Table 3.2b: Glycated protein identification by LC-MS analysis from clinical plasma samples

Table 3.2c: Glycated protein identification by LC-MS analysis from in vitro glycated plasma samples

Table 4.1: Parameters evaluated in ten controlled, poorly controlled diabetic patients and normal controls for 2DE, western blot, and LC-MS analysis

Table 4.2: Protein identification and fold expression in diabetic and non diabetic controls by using 2DE and LC-MS analysis
