Abstract

Chapter 1 : Introduction 1-11

1.1 Background 2-10
1.1.1 Transition in the causes of infant mortality in India 2
1.1.2 Public health implications of birth defects in India 3
1.1.3 Haemophilia 4
1.1.4 Magnitude of patients in India 4
1.1.5 Access to treatment and out of pocket expenditures 6
1.1.6 Complications 7
1.1.7 Emergence of haemophilia services and their public health implications 8
1.1.8 Comprehensive care for haemophilia 9
1.1.9 Role of psychosocial support 10

1.2 Research gap and objectives 11

1.3 Utility of the study 11
Chapter 2 : Review of Literature

2.1 Psychosocial impact of haemophilia

2.2 Quality of Life (QOL) and Health Related Quality of Life (HRQOL)
   2.2.1 Measures of QOL
   2.2.2 Generic QOL tools
   2.2.3 Haemophilia specific QOL instruments
   2.2.4 Peds Quality of Life Family Impact Module (PedsQL™ FIM)

2.3 Review of QOL of patients with haemophilia

2.4 Review of QOL studies on parents

2.5 PSS for parents of patients with haemophilia

2.6 Rationale and justification of this study

Chapter 3 : Materials and methods

3.1 Psychosocial needs assessment of parents of children with haemophilia
   3.1.1 Research Design
   3.1.2 Study settings and participants
   3.1.3 Ethical considerations
   3.1.4 Sample size
   3.1.5 Study instrument
   3.1.6 Data collection
3.1.7 Data analysis 39

3.2 Development of an audio-visual psychosocial support (PSS) module 39-41

3.2.1 Content of the PSS module 39

3.2.2 Review of PSS module 41

3.2.3 Development of audio-visual presentation 41

3.3 Intervention and impact measurement 41-57

3.3.1 Research design 41

3.3.2 Study setting 43

3.3.3 Sample size 44

3.3.4 Inclusion criteria 44

3.3.5 Exclusion criteria 44

3.3.6 Study instruments 45

3.3.7 Definitions 50

3.3.8 Data collection 51

3.3.9 Data analysis 53

3.3.10 Limitations of the study 57

Chapter 4 : Results 58-129

4.1 Development of a PSS module 60-77

4.1.1 Psychosocial needs assessment of parents 61-73

a. Socio-demographic characteristics of participants 61

b. Content analysis of transcripts of in-depth interviews 61
c. Main findings 73

4.1.2 Development of PSS module 74-77
a. Components of the psychosocial module 75
b. Stakeholder review of module and its finalization 76

4.2 Impact of PSS module 78-128

4.2.1 Delivery of PSS module 79

4.2.2 Description of sample 79-83
a. Description of sample 79
b. Socio-demographic characteristics of participants 80
c. Characteristics of patients 80

4.2.3 Knowledge about haemophilia 84-94
a. Mean scores for knowledge about haemophilia 84
b. Proportion of correct answers by sections 86
c. Main findings 94

4.2.4 Practice of management of bleeding episodes 95-101
a. Type and site of bleeding 95
b. Treatment used 97
c. Use of first aid to control bleeding 98
d. Perceived duration of bleeding and school days lost 99
e. Main findings 101

4.2.5 HRQOL 102-128
a. Validation of Peds™ QL FIM tool 102
b. Baseline TIS, HRQOL and family functioning of parents 107

c. Comparison of HRQOL between mothers and fathers of children with haemophilia 108

d. Post intervention TIS, HRQOL and family functioning scores 109

e. Parental response at baseline, six months and one year after intervention 112

f. Main findings 128

**Chapter 5 : Discussion** 129-136

5.1 The study context 130

5.2 Development of the PSS module 130

5.3 Impact of the developed PSS on knowledge about haemophilia 132

5.4 Impact of the developed PSS on practice of management of bleeding episodes 133

5.5 Impact of the developed PSS on HRQOL 134

5.6 What this study adds to the literature 135

5.7 Limitations of this study 135
