LIST OF FIGURES

1.1. Effect of HgCl$_2$ in surface sterilization ...........................................23

1.2. Influence of IAA, IBA and NAA on *in vitro* root induction
from 25 shootlet cultures of *J. adhatoda* L. after 30 days ..........29

2.1. Influence of IAA, IBA and NAA on *in vitro* root induction
from callus cultures of *J. adhatoda* L after 30 days .................48

3.1. Graphical representation of separation of extract from
callus and suspension culture of *Justicia adhatoda* by TLC ........71

3.2. Standard graph of vasicine .................................................................72

3.3. The concentration of vasicine in suspension cultures of
*J. adhatoda* in different growth periods ............................................72

3.4. A. HPLC chromatogram of vasicine standard ..................................73

3.4. B. HPLC chromatogram of VAS II ....................................................74

3.4. C. HPLC chromatogram of VAS I .......................................................74

3.5. A. FT-IR spectrum of VAS I .............................................................75

3.5. B. FT-IR spectrum of VAS-II ............................................................76

3.5. C. FT-IR spectrum of standard vasicine ..........................................76

4.1. Effect of NAA as elicitor for vasicine production from
*J. adhatoda* suspension culture with Control .......................89
4.2. Effect of mannitol as elicitor for vasicine production from J. adhatoda suspension culture with control ................................. 90

5.1. Effect of NaCl on growth and survival of callus ............................. 103

5.2. Quantitative analysis of vasicine produced from three randomly selected salt tolerant plants.............................................. 103

6.1. Dendrogram of PCR-RAPD for somaclones of J. adhatoda ...... 116

7.1. Graphical representation of vasicine production from hairy root and from root of field grown plant.............................................. 133

8.1. Graph showing zone of Inhibition against antibacterial agents ......................................................................................... 151

8.2. Graph showing zone of Inhibition against antifungal agents....... 151
