RECOMMENDATION
9. RECOMMENDATIONS

By way of recommendation, further studies including chronic models of Anti inflammatory, Analgesics, Anti convulsion and anti ulcer activity can be carried out on the synthesized compounds. Also, structural elucidation of the synthesized compounds as well as neurochemical analysis can be done to elucidate the precise mechanism of action of the synthesized compounds in inflammation and analgesia. Finally but not the least, toxicological studies can be done to establish the safety level of the synthesized compounds.
