LIST OF TABLES

Table 3.1. Antioxidant (GPx, GSH) and lipid peroxidation levels in various tissues of mice administered with different concentrations of SN and ZN for 14 days

Table 3.2. Levels of various serum markers in mice administered with SNLA and ZNLA for 14 days

Table 3.3.a. Effect of administration of SNLA and ZNLA on antioxidant (GPx, GSH, SOD) and lipid peroxidation levels in liver and brain of whole body radiation exposed mice

Table 3.3.b. Effect of administration of SNLA and ZNLA on antioxidant (GPx, GSH, SOD) and lipid peroxidation levels in kidney and intestine of whole body radiation exposed mice

Table 3.4. Effect of SNLA and ZNLA administration on spleen colony formation and recovery of spleen weight in mice exposed to whole body gamma radiation

Table 3.5. Effect of SNLA and ZNLA administration on radiation induced micronuclei formation in peripheral blood reticulocytes of whole body radiation exposed mice

Table 3.6.a. Effect of SNLA and ZNLA on radiation induced chromosomal aberrations and number of chromosomal aberrations per cell in human peripheral blood lymphocytes ex vivo

Table 3.6.b. Effect of SNLA and ZNLA on radiation induced polyploidy, SDC and pulverization in human peripheral blood lymphocytes ex vivo

Table 3.7.a. Effect of SNLA and ZNLA administration on radiation induced chromosomal aberrations and number of chromosomal aberrations per cell in bone marrow of whole body radiation exposed mice

Table 3.7.b. Effect of SNLA and ZNLA administration on radiation induced polyploidy, SDC and pulverization in bone marrow of whole body radiation exposed mice

Table 3.8.a. Effect of SNLA and ZNLA administration on endogenous antioxidant status and membrane lipid peroxidation in heart and tumor tissues of DOX treated mice
Table 3.8.b. Effect of SNLA and ZNLA administration on endogenous antioxidant status and membrane lipid peroxidation in kidney and tumor tissues of CDDP treated mice

Table 4.1. Effect of administration of TPL on antioxidant (GPx, GSH, SOD) and lipid peroxidation levels in liver, brain and kidney of whole body radiation exposed mice

Table 4.2. Effect of TPL administration on spleen colony formation and recovery of spleen weight in mice exposed to whole body gamma radiation

Table 4.3. Effect of TPL administration on radiation induced micronuclei formation in peripheral blood lymphocytes of whole body radiation exposed mice

Table 4.4.a. Effect of TPL on radiation induced chromosomal aberrations and number of chromosomal aberrations per cell in human peripheral blood lymphocytes \textit{ex vivo}

Table 4.4.b. Effect of TPL on radiation induced polyploidy, SDC and pulverization in human peripheral blood lymphocytes \textit{ex vivo}

Table 4.5.a. Effect of TPL administration on radiation induced chromosomal aberrations and number of chromosomal aberrations per cell in bone marrow of whole body radiation exposed mice

Table 4.5.b. Effect of TPL administration on the induction of polyploidy, SDC and pulverization in bone marrow of whole body radiation exposed mice

Table 4.6.a. Effect of TPL administration on endogenous antioxidant status and membrane lipid peroxidation in heart and tumor tissues of DOX treated mice

Table 4.6.b. Effect of TPL administration on endogenous antioxidant status and membrane lipid peroxidation in kidney and tumor tissues of CDDP treated mice
