List of Tables

Table 1.1. Detailed description of metals .................................................................4
Table 2.1. Classification of metals based on characteristics of health effects...........11
Table 2.2. Symptoms or diseases associated with humans exposed to high heavy metal (HM) concentrations .................................................................16
Table 3.1. List of Chemicals ..................................................................................60
Table 4.1.1. Physico-chemical characteristics of Surface Water (SW) from Agricultural Area (AA), Industrial Area (IA) and Coal Mining Area (CMA) ..............65
Table 4.1.2. Physico-chemical characteristics of Ground Water (GW) from Agricultural Area (AA), Industrial Area (IA) and Coal Mining Area (CMA) ..........66
Table 4.1.3. Physico-chemical characteristics of Tap Water (TW) from Agricultural Area (AA), Industrial Area (IA) and Coal Mining Area (CMA) .........67
Table 4.1.4. Concentration (mg/l) of Lead in Surface Water (SW), Ground Water (GW) and Tap Water (TW) from Agricultural Area (AA) Industrial Area (IA) and Coal Mining Area (CMA) ................................................70
Table 4.1.5. Concentration (mg/l) of Cadmium in Surface Water (SW), Ground Water (GW) and Tap Water (TW) from Agricultural Area (AA) Industrial Area (IA) and Coal Mining Area (CMA) ................................................71
Table 4.1.6. Concentration (mg/l) of Chromium in Surface Water, Ground Water and Tap Water from Agricultural Area (AA), Industrial Area (IA) and Coal Mining Area (CMA) ................................................71
Table 4.1.7. Concentration (mg/l) of Zinc in Surface Water, Ground Water and Tap Water from Agricultural Area (AA), Industrial Area (IA) and Coal Mining Area (CMA) ................................................72
Table 4.1.8. Concentration (mg/l) of Iron in Surface Water, Ground Water and Tap Water from Agricultural Area (AA), Industrial Area (IA) and Coal Mining Area (CMA) ................................................73
Table 4.1.9. Concentration (mg/l) of Copper in Surface Water, Ground Water and Tap Water from Agricultural Area (AA), Industrial Area (IA) and Coal Mining Area (CMA) ................................................73
Table 4.1.10. Concentration (mg/l) of Cobalt in Surface Water, Ground Water and Tap Water from Agricultural Area (AA), Industrial Area (IA) and Coal Mining Area (CMA) ................................................74
Table 4.2.1. Physico-chemical characteristics of soil (S1) adhered to Spinacia oleracea at Agricultural Area (AA), Industrial Area (IA) and Coal Mining Area (CMA) ................................................82
Table 4.2.2. Physico-chemical characteristics of soil (S2) adhered to Solanum tuberosum at Agricultural Area (AA), Industrial Area (IA) and Coal Mining Area (CMA) ................................................82
Table 4.2.3. Physico-chemical characteristics of soil (S3) adhered to cereals at Agricultural Area (AA), Industrial Area (IA) and Coal Mining Area (CMA) ..............83
Table 4.2.4. Physico-chemical characteristics of Reference soil (S4) at Agricultural Area (AA), Industrial Area (IA) and Coal Mining Area (CMA) ..................84
Table 4.2.5. Concentration (mg/kg) of lead in soil samples from Agricultural Area (AA), Industrial Area (IA) and Coal Mining Area (CMA) .........................86
Table 4.2.6. Concentration (mg/kg) of cadmium in soil samples from Agricultural Area (AA), Industrial Area (IA) and Coal Mining Area (CMA) .....................87
Table 4.2.7. Concentration (mg/kg) of chromium in soil samples from Agricultural Area (AA), Industrial Area (IA) and Coal Mining Area (CMA) ........................................88
Table 4.2.8. Concentration (mg/kg) of zinc in soil samples from Agricultural Area (AA), Industrial Area (IA) and Coal Mining Area (CMA) ........................................89
Table 4.2.9. Concentration (mg/kg) of iron in soil samples from Agricultural Area (AA), Industrial Area (IA) and Coal Mining Area (CMA) ........................................90
Table 4.2.10. Concentration (mg/kg) of copper in soil samples from Agricultural Area (AA), Industrial Area (IA) and Coal Mining Area (CMA) ........................................90
Table 4.2.11. Concentration (mg/kg) of cobalt in soil samples from Agricultural Area (AA), Industrial Area (IA) and Coal Mining Area (CMA) ........................................91
Table 4.3.1. Moisture content (%) in different parts of food crops from Agricultural Area (AA), Industrial Area (IA) and Coal Mining Area (CMA) ........................................99
Table 4.3.2. Concentration (mg/kg) of lead in edible and inedible parts of food crop from Agricultural Area (AA), Industrial Area (IA) and Coal Mining Area (CMA) ........................................100
Table 4.3.3. Concentration (mg/kg) of cadmium in edible and inedible parts of food crop from Agricultural Area (AA), Industrial Area (IA) and Coal Mining Area (CMA) ........................................101
Table 4.3.4. Concentration (mg/kg) of chromium in edible and inedible parts of food crop from Agricultural Area (AA), Industrial Area (IA) and Coal Mining Area (CMA) ........................................102
Table 4.3.5. Concentration (mg/kg) of zinc in edible and inedible parts of food crop from Agricultural Area (AA), Industrial Area (IA) and Coal Mining Area (CMA) ........................................103
Table 4.3.6. Concentration (mg/kg) of iron in edible and inedible parts of food crop from Agricultural Area (AA), Industrial Area (IA) and Coal Mining Area (CMA) ........................................104
Table 4.3.7. Concentration (mg/kg) of copper in edible and inedible parts of food crop from Agricultural Area (AA), Industrial Area (IA) and Coal Mining Area (CMA) ........................................104
Table 4.3.8. Concentration (mg/kg) of cobalt in edible and inedible parts of food crop from Agricultural Area (AA), Industrial Area (IA) and Coal Mining Area (CMA) ........................................105
Table 4.3.9. Comparison of per cent difference of concentration of metals in crops grown in Industrial Area (IA) and Coal Mining Area (CMA) with their concentrations in crops grown in Agricultural Area (AA) ........................................106
Table 4.4.A.1. Comparison of Transfer Factors of metals from soil to edible and inedible parts of spinach and potato plants grown at Agricultural Area (AA), Industrial Area (IA) and Coal Mining Area (CMA) ........................................115
Table 4.4.B.1. Daily intake of metals (mg/kg body wt./person/day) contributed by 100 g of *Spinacia oleracea* (spinach leaves) grown at Agricultural Area (AA), Industrial Area (IA) and Coal Mining Area (CMA) ........................................120
Table 4.4.B.2. Daily intake of metals (mg/kg body wt./person/day) contributed by 200 g of *Solanum tuberosum* (potato) grown at Agricultural Area (AA), Industrial Area (IA) and Coal Mining Area (CMA) ........................................121
Table 4.4.B.3. Daily intake of metals (mg/kg body wt./person/day) contributed by 450 g of *Oryza sativa* (Rice) grown at Agricultural Area (AA), Industrial Area (IA) and Coal Mining Area (CMA) ........................................122
Table 4.4.B.4. Daily intake of metals (mg/kg body wt./person/day) contributed by 450 g of *Triticum aestivum* (wheat) grown at Agricultural Area (AA), Industrial Area (IA) and Coal Mining Area (CMA) ........................................123
Table 4.4.B.5. Daily intake of metals (mg/kg body wt./person/day) contributed by 450 g of *Zea mays* (maize) grown at Agricultural Area (AA), Industrial Area (IA) and Coal Mining Area (CMA) .................................................................124

Table 4.4.B.6. Daily intake of metals (mg/kg body wt./person/day) in *Tap water* (TW) at Agricultural Area (AA), Industrial Area (IA) and Coal Mining Area (CMA) ........................................................................................................125

Table 4.4.C.1. Health Risk Index from consumption of 100 g of *Spinacia oleracea* (spinach) grown at Agricultural Area (AA), Industrial Area (IA) and Coal Mining Area (CMA) ........................................................................................................129

Table 4.4.C.2. Health risk index of metals from consumption of 200 g *Solanum tuberosum* (potato) grown at Agricultural Area (AA), Industrial Area (IA) and Coal Mining Area (CMA) ........................................................................................................130

Table 4.4.C.3. Health risk index of metals from consumption of 450 g of *Oryza sativa* (Rice) grown at Agricultural Area (AA), Industrial Area (IA) and Coal Mining Area (CMA) ........................................................................................................130

Table 4.4.C.4. Health risk index of metals from consumption of 450 g *Triticum aestivum* (wheat) grown at Agricultural Area (AA), Industrial Area (IA) and Coal Mining Area (CMA) ........................................................................................................131

Table 4.4.C.5. Health risk index of metals from consumption of 450 g *Zea mays* (maize) grown at Agricultural Area (AA), Industrial Area (IA) and Coal Mining Area (CMA) ........................................................................................................132

Table 4.4.C.6. Health risk index of metals from consumption of 2 litres of tap water at Agricultural Area (AA), Industrial Area (IA) and Coal Mining Area (CMA) .................................................................133

Table 4.5.1. Demographic characteristics of the volunteers enrolled for the study ........140

Table 4.5.2. Metals concentration in whole blood of Controls (C) and Coal Mining Exposed (CME) respondents .................................................................141

Table 4.6.1. Iron status indicators in control (C) and coal mining exposed (CME) respondents .................................................................155

Table 4.6.2. Oxidative stress markers in blood of control (C) and coal mining exposed (CME) respondents .................................................................156

Table 4.7.1. Demographic characteristics of the volunteers enrolled for the study ........167

Table 4.7.2. MDA and SOD in control (C) and coal mining exposed (CME) respondents at varying concentrations of Pb (NO₃)₂ .................................................................168

Table 4.7.3. MDA and SOD in blood of control (C) and coal mining exposed (CME) respondents at varying concentrations of CdCl₂ .................................................................171
