ACKNOWLEDGMENTS

This work would not have been possible without the active help of many well-wishers, who chipped in at various stages to ensure that I succeeded in this endeavour.

My supervisors Prof V. P. Gulati and Prof A. K. Pujari gave me an opportunity to work on this doctoral thesis and fine-tuned the project idea. They inspired me to take on this work and remain focused. I will always remember their zeal and encouragement. My sincere gratitude to both of them.

I am deeply grateful to the Faculty of the Institute for Development and Research in Banking Technology and the Department of Computer and Information Sciences, University of Hyderabad, for their valuable advices during this project. They helped me not only in the planning phase but were also readily available for discussions, whenever required.

I sincerely thank the staff at the IDRBT and the Librarian for readily making available a lot of data and guiding me to zero in on the right resources. Without them, this task would have been much more difficult and time-consuming.

Thanks are also due to my family. Each one of them shared my responsibilities and took off all the pressures, thereby allowing me to concentrate on this work. My warmest thanks to my family. I also thank my friends who were a source of constant encouragement.

November 2004
