ACKNOWLEDGMENTS

This thesis is the outcome of my coming into close contact with Dr. I.L. Srivastava, an eminent and reputed teacher of Agricultural Economics, whose constant and enlightening guidance generated in me an unflagging interest in the problems of economic development. This work would not have been possible, but for the inspiration and encouragement, which I got from him in ample measure. I owe to him a deep sense of gratitude for giving his precious time generously to me during the research period, and for helping me in every way.

I am grateful to Shri P.N. Srivastava for assisting me in the collection and analysis of data, and to Shri A.K. Satkar for rendering valuable advice on the technical aspects of various industrial alternatives.

GIRISH CHANDRA SRIVASTAVA.
