</table>
Physical models supposedly representing the conformation of copolymer at the interface of a heterogeneous polymer blend ........................................................................................................ 47

Illustration of the probable alignment of block copolymers at an interface .......................................................................................................................... 48

Types of morphology in immiscible polymer blends, illustrated by SEM photographs of cryofractures ................................................................. 58

SEM micrograph of a fibrillar morphology ................................................................. 59

SEM micrograph of a core shell morphology ................................................................. 59

Transmission electron microscopy (TEM) microscope of an onion ring morphology ......................................................................................................... 60

States of droplet deformation of Newtonian media in shear fields ................................................................................................................................. 62

Important mechanisms in morphology development during polymer blending of nylon/EPM rubber blends ................................................................. 63

Schematic representation showing morphology development mechanisms during polymer blending process ........................................................................ 64

Average droplet diameter as a function of viscosity ratios of PP/PC blends ................................................................................................................................. 65

Schematic wave formation in deformed fibres and their breaking off into droplets ........................................................................................................ 66

Examples of melt droplets under low deformation ................................................................................................................................. 67

Phase inversion mechanism ......................................................................................... 69

Phase inversion in binary polymer blends. The theoretical scheme is based on the Krieger-Dougherty equation ........................................................................ 70

Idealised depiction of coalescence in polymer blends ............................................... 75

Emulsification curve for polystyrene/ethylene-propylene rubber 90:10 blend compatibilised with SEBS triblock copolymer ................................................................................................................................. 76

Mechanism for suppression of coalescence in compatibilised blends ................................................................................................................................. 77

Morphology sketch of MA-g-PP compatibilised PA6/PP/organoclay nanocomposites ................................................................................................................................. 84

Proposed interaction between PA-g-PP and organoclay ........................................... 85
Chapter 2

2.1 The urethane linkage ................................................................. 114
2.2 Polyaddition reaction for preparing Polyurethane ...................... 115
2.3 Basic structure of TPU ............................................................... 118
2.4 Structures of TDI and MDI ....................................................... 119
2.5 Structure of Poly tetra ethylene adipate (PTMA) ......................... 121
2.6 Structure of Poly (oxytetramethylene) glycols (PTMEG) ............ 121
2.7 Chemical Structure of TPU ..................................................... 122
2.8 Structure of isotactic PP .......................................................... 125
2.9 Structure of syndiotactic PP ..................................................... 125
2.10 Schematic of the crystal structure of layered silicates (smectite clays) ................................................................. 126
2.11 Organic modifier (2MBHT) .................................................... 128

Chapter 3

3.1 Scanning electron micrographs of 70/30 blends with addition of (a) 0 (b) 3 (c) 5 (d) 7 weight % MA-g-PP ......................... 146
3.2 Scanning electron micrographs of 70/30 blends with addition of (a) 0 (b) 3 (c) 5 (d) 7 weight % MA-g-PP ......................... 147
3.3 (a) Effect of compatibiliser concentration on the dispersed domain diameter of TPU/PP (70/30) blends ....................... 148
3.3 (b) Particle distribution curve of ester-TPU/PP (70/30) blends ................................................................. 148
3.3 (c) Particle distribution curve of ether-TPU/PP (70/30) blends ................................................................. 148
3.3 (d) SEM images of uncompatibilised TPU/PP blends with 30/70 and 50/50 ratios ................................................................. 149
3.4 Schematic of hydrogen bonding and chemical reaction among PP, MA-g-PP, nano clay and TPU ......................... 150
3.5 Chemical reaction between urethane linkage and maleic anhydride ................................................................. 151
3.6 Effect of compatibiliser concentration on K value ..................... 154
3.7 Schematic models illustrating the conformation of the copolymer at the interface (a) Fully extended model (b) Completely flat model (c) Intermediate model ........................................... 155

3.8 Variation of particle size reduction as a function of volume % of compatibiliser .............................................................................................................. 157

3.9 Effect on MA-g-PP on the χ values by Leibler’s theory .................. 160

3.10 Ester based TPU blend TPU (nano)/PP/MA-g-PP (70/25/5) (a) 1% nano (b) 3% nano (c) 5% nano (Nano content in TPU) .......... 161

3.11 Ether based TPU blend TPU (nano)/PP/MA-g-PP (70/25/5) (a) 1% nano (b) 3% nano (c) 5% nano (Nano content in TPU) ...... 162

3.12 Nanoclay emulsification curve-TPU(nano)/PP/MA-g-PP (70-nano/25/5) .................................................................................................................. 163

3.13 Effect of sequence of nanoclay addition in compatibilised TPU/PP blends (a) Ester-TPU/PP (nano)/MA-g-PP (b) Ester-TPU (nano)/PP/MA-g-PP .................................................................................................................. 164

(c) Ether-TPU/PP (nano)/MA-g-PP (d) Ether-TPU (nano)/PP/MA-g-PP ......................................................................................... 164

3.14 Influence of nanoclay addition on ester-TPU based blends XRD pattern .......................................................... 165

3.15 Influence of nanoclay addition on ether-TPU based blends XRD pattern ........................................................................ 166

3.16 Nanoclay intercalation and exfoliation position .................. 168

3.17 TEM images of nanoclay intercalation and exfoliation .......... 168

3.18 TEM images of ester- TPU (a) 3%, (b) 5% nanoclay loading .... 169

3.19 TEM images of ether- TPU (a) 3%, (b) 5% nanoclay loading .... 169

3.20 TEM images of ester –TPU based blends .......................... 170

3.21 TEM images of ether- TPU based blends ...................... 170

3.22 TEM images of sequence of nanoclay addition in ester-TPU based blends ......................................................................................... 171

3.23 TEM images of sequence of nanoclay addition in ether-TPU based blends ......................................................................................... 171

3.24 Neat ester-TPU FTIR .................................................. 176

3.25 Neat ether-TPU FTIR .................................................. 176

Chapter 5

5.1 Neat polymers TGA analysis ............................................................... 229
5.2 Neat polymers DTG analysis ............................................................... 229
5.3 Effect of blend ratio on the thermograms of TPU/PP blends
   (a) Ester-TPU based thermograms (b) Ester-TPU based
derivative thermograms.............................................................. 233
5.4 Effect of blend ratio on the thermograms of TPU/PP blends
   (a) Ether-TPU based thermograms (b) Ether-TPU based
derivative thermograms.............................................................. 234
5.5 Effect of blend ratio on the thermograms of compatibilised
   TPU/PP blends
   (a) Ester-TPU based thermograms (b) Ester-TPU based
derivative thermograms.............................................................. 240
5.6 Effect of blend ratio on the thermograms of compatibilised
   TPU/PP blends
   (a) Ether-TPU based thermograms (b) Ether-TPU based
derivative thermograms.............................................................. 241
5.7 (a) Neat PP DSC thermogram ............................................................ 246
5.7 (b) Effect of blend ratio on the $T_g$ of ester-TPU/PP blends .............. 246
5.8 (a) Effect of blend ratio on PP crystallization behaviour of
   ester -TPU/PP blends ............................................................... 246
5.8 (b) Effect of blend ratio on the PPs ($\Delta H_f$) Enthalpy of fusion
   in the heating curves of ester-TPU/PP blends ......................... 247
5.9 Effect of blend ratio on the TPUs $T_g$ in the heating curves of
   ether-TPU/PP blends ............................................................... 247
5.10 (a) Effect of blend ratio on PP crystallization behaviour of
   ether -TPU/PP blends ............................................................... 248
5.10 (b) Effect of blend ratio on the PPs ($\Delta H_f$) Enthalpy of fusion
   in the heating curves of ether-TPU/PP blends ......................... 248
5.11 Effect of nanoclay on compatibilised ester TPU blends $T_g$ .............. 252
5.12 Effect of compatibiliser and nanoclay on melting behaviour
   of ester 70/30 TPU/PP blends .................................................. 253
5.13 Effect of compatibiliser and nanoclay on crystallization
   behaviour on ester 70/30 TPU/PP blends ................................. 253
5.14 Effect of compatibiliser and nanoclay on $T_g$ of ether 70/30 TPU/PP blends ................................................................. 255
5.15 Effect of compatibiliser and nanoclay on melting behaviour of ether 70/30 TPU/PP blends .......................................................... 255
5.16 Effect of compatibiliser and nanoclay on crystallization behaviour on ether 70/30 TPU/PP blends .............................................. 256
5.17 Neat polymers wide angle X-ray diffractograms ......................... 258
5.18 (a) Ester-TPU wide angle X-ray diffractograms ............................ 258
(b) Ether TPU wide angle X-ray diffractograms ................................. 259
5.19 Compatibilised ester- TPU/PP blends wide angle X-ray diffractograms .......................................................... 261
5.20 Compatibilised ether- TPU/PP blends wide angle X-ray diffractograms .......................................................... 261
5.21 Uncompatibilised-ester TPU (a) $\eta^*$ vs $\omega$, (b) $G'$ vs $\omega$, (c) $G''$ vs $\omega$ compatibilised-ester TPU (d) $\eta^*$ vs $\omega$, (e) $G'$ vs $\omega$, (f) $G''$ vs $\omega$ ................................................................. 263
5.22 Uncompatibilised-ether TPU (a) $\eta^*$ vs $\omega$, (b) $G'$ vs $\omega$, (c) $G''$ vs $\omega$ compatibilised-ether TPU (d) $\eta^*$ vs $\omega$, (e) $G'$ vs $\omega$, (f) $G''$ vs $\omega$ ................................................................. 264

Chapter 6

6.1 (a) Storage modulus (b) Log storage modulus of ester-TPU based uncompatibilised blends ..................................................... 277
6.1 (c) Loss modulus (d) $\tan\delta$ of ester- TPU based uncompatibilised blends ............................................................................. 277
6.2 (a) Storage modulus (b) Log storage modulus of ether-TPU based uncompatibilised blends ..................................................... 278
6.2 (c) Loss modulus (d) $\tan\delta$ of ether-TPU based uncompatibilised blends ............................................................................. 278
6.3 TPU based blends theoretical model of (a) Ester based blends (b) Ether based blends as a function of volume fraction of PP at 10°C TPU/PP (70/30) theoretical model of (c) Ester based blends (d) Ether based blends as a function of temperature ............................................................ 283
6.4 (a) Storage modulus (b) Log storage modulus of compatibilised ester-TPU based blends ..................................................... 287
### Chapter 6

6.4 (c) Loss modulus  (d) Tanδ of compatibilised ester-TPU based blends ................................................................. 287

6.5 (a) Storage modulus  (b) Log storage modulus of compatibilised ether-TPU based blends ..................................... 288

6.5 (c) Loss modulus  (d) Tanδ of compatibilised ether-TPU based blends .............................................................................. 289

6.6 Effect sequence of nanoclay addition on compatibilised TPU/PP blends ................................................................. 293

6.7 The Cole-Cole Plot of different TPU/PP blends at a frequency of 10Hz................................................................. 294

### Chapter 8

8.1 Variation of volume resistivity of TPU/PP blends with TPU content at 30° C ................................................................. 320

8.2 Volume resistivity of ester-TPU, PP and their blends as a function of frequency at 30° C ................................................. 321

8.3 Volume resistivity of ether-TPU, PP and their blends as a function of frequency at 30° C ................................................. 321

8.4 Variation of dielectric constant of ester-TPU /PP blends with frequency at 30° C ................................................................. 323

8.5 Variation of dielectric constant of ether-TPU /PP blends with frequency at 30° C ................................................................. 323

8.6 Variation of dissipation factor of ester-TPU /PP blends with frequency at 30° C ................................................................. 326

8.7 Variation of loss factor of ester-TPU /PP blends with frequency at 30° C ................................................................. 327

8.8 Variation of dissipation factor of ether-TPU /PP blends with frequency at 30° C ................................................................. 327

8.9 Variation of loss factor of ether-TPU /PP blends with frequency at 30° C ................................................................. 328

8.10 Comparison of experimental values obtained for dielectric constant with theoretical predictions for ester – TPU based blends................................................................................................. 329

8.11 Comparison of experimental values obtained for dielectric constant with theoretical predictions for ether – TPU based blends. ................................................................................................. 330
8.12 Effect of compatibiliser concentration on the volume resistivity as a function of frequency at 30°C for ester based TPU based blends ................................................................. 331
8.13 Effect of compatibiliser concentration on the volume resistivity as a function of frequency at 30°C for ether based TPU based blends ................................................................. 331
8.14 Effect of nanoclay addition on the volume resistivity as a function of frequency at 30°C for compatibilized ester based TPU based blends ................................................................. 332
8.15 Effect of nanoclay addition on the volume resistivity as a function of frequency at 30°C for compatibilized ether based TPU based blends ................................................................. 332
8.16 Effect of compatibiliser concentration on the dielectric constant as a function of frequency at 30°C (a) Ester – TPU based (b) Ether – TPU based ................................................................. 333
8.17 Effect of nanoclay addition on the dielectric constant as a function of frequency at 30°C for compatibilized (a) Ester - TPU based (b) Ether-TPU based ................................................................. 333
8.18 Effect of compatibiliser concentration on the dissipation factor as a function of frequency at 30°C for ester-TPU based blends ................................................................. 334
8.19 Effect of compatibiliser concentration on the dissipation factor as a function of frequency at 30°C for ether-TPU based blends ................................................................. 334
8.20 Effect of nanoclay addition on the dissipation factor as a function of frequency at 30°C for compatibilized (a) Ester - TPU based (b) Ether-TPU based ................................................................. 335
8.21 Effect of nanoclay addition on the loss factor as a function of frequency at 30°C for compatibilised (a) Ester - TPU based (b) Ether-TPU based ................................................................. 335

Chapter 9
9.1 Sorption curves showing % uptake of water for polymers and their blends at room temperature. (a) Ester- TPU based (b) Ether-TPU based ................................................................. 343
9.2 A schematic model representing the diffusion process in (a) TPU/PP(100/0) (b) TPU/PP(70/30) (c) TPU/PP(50/50) (d) TPU/PP(30/70) (e) TPU/PP(0/100) ................................................................. 345
