# Introduction: Background Literature

1.1 General

1.1.1 Plastic: History

1.1.2 Raw materials for plastics

1.1.3 Chemistry, types, properties and uses of plastics

1.1.4 Environmental issues related to plastics

1.2 Disposal methods

1.2.1 Recycling

1.2.2 Incineration

1.2.3 Landfills

1.2.4 Construction of roads

1.3 Degradation of Plastics

1.3.1 Thermal Degradation

1.3.2 Ozone-induced degradation

1.3.3 Biodegradation

1.3.4 Advanced Oxidation Processes (AOP)

1.3.4.1 Homogeneous AOP

1.3.4.2 Heterogeneous AOP

1.3.4.3 General mechanism of AOP

1.3.4.4 Photocatalysis

1.3.4.4.1 Homogeneous photocatalysis

1.3.4.4.2 Heterogeneous photocatalysis

1.3.4.4.2.1 Semiconductors as Photocatalysts

1.3.4.4.2.2 Typical photocatalytic studies on plastic materials

# Objectives of the Study, Materials Used and Plan of the Thesis

2.1 Objectives

2.2 Materials used

2.2.1 Titanium dioxide (TiO₂)

2.2.2 Zinc oxide (ZnO)

2.2.3 Potassium peroxydisulphate

2.2.4 Hydrogen peroxide (H₂O₂)

2.2.5 Fenton reagent

2.2.6 Polyethylene (PE) plastic

2.2.7 Polyvinyl chloride (PVC)

2.3 Miscellaneous materials
Chapter 3
PATTERN OF THE USE AND DISPOSAL OF PLASTIC PRODUCTS IN A TYPICAL VILLAGE COMMUNITY IN KERALA STATE, INDIA: A CASE STUDY .................. 69-92

3.1 Introduction ................................................................. 69
3.2 Methodology ................................................................. 71
3.3 Results and Discussion ................................................... 75
  3.3.1 Quantity of plastic wastes generated .................... 75
  3.3.2 Types of common plastic wastes ......................... 76
  3.3.3 Category-wise quantification of different types of waste ...... 83
  3.3.4 Quantity of plastic waste vs family size ................... 84
3.4 Questionnaire survey of plastic pollution-related facts ...... 85
  3.4.1 Findings from the questionnaire survey ................. 86
3.5 Conclusions ................................................................. 91

Chapter 4
SEMICONDUCTOR OXIDE MEDIATED PHOTOCATALYTIC DEGRADATION OF LOW DENSITY POLYETHYLENE PLASTIC WASTES ......................... 93 - 166

4.1 Introduction ................................................................. 93
4.2 Material and Methods ................................................... 96
  4.2.1 ZnO ................................................................. 96
  4.2.2 TiO$_2$ .......................................................... 99
  4.2.3 Miscellaneous chemicals ...................................... 103
4.3 Photocatalytic experiments ........................................... 104
4.4 Results and Discussion .................................................. 106
  4.4.1 Effect of catalyst dosage ..................................... 107
  4.4.2 Effect of irradiation time ..................................... 108
  4.4.3 Effect of pH ...................................................... 109
  4.4.4 Effect of oxidizers on the degradation ................. 111
  4.4.5 Use of Fenton reagent for the degradation of LDPE ....... 116
    4.4.5.1 Photofenton process .................................. 119
  4.4.6 Effect of anions and cations on TiO$_2$/UV system ....... 126
    4.4.6.1 Adsorption of anions on the catalyst ............... 130
    4.4.6.2 Scavenging effect of anions ......................... 131
    4.4.6.3 Surface layer formation ............................... 132
    4.4.6.4 Steric effect .......................................... 135
  4.4.7 Effect of cations ............................................... 137
4.4.8 Effect of anions on TiO₂/PDS/UV system .................................................. 140
4.4.9 Degradation of LDPE plastic in sea water ............................................. 142
4.4.10 Effect of carbon ................................................................................. 145
4.4.11 Effect of colour of the plastic sheet on the degradation ................. 147
4.4.12 Effect of thickness of plastic sheet ..................................................... 148
4.4.13 Role of O₂/air in photocatalysis ......................................................... 149
4.4.14 Recycling of TiO₂ ............................................................................. 150
4.4.15 Characterisation of used TiO₂ catalyst ............................................. 153
4.4.16 Physical and chemical changes in LDPE after photocatalysis .......... 158
4.4.17 Mechanism of semiconductor photocatalysis ................................... 160
4.5 Conclusions ............................................................................................ 165

Chapter 5
PHOTOLYTIC/PHOTOCATALYTIC DEGRADATION OF POLYVINYL CHLORIDE PLASTIC WASTES FROM THE ENVIRONMENT ................................................................. 167 - 208
5.1 Introduction ............................................................................................ 167
5.2 Materials and Methods .......................................................................... 169
5.3 Results and Discussion ......................................................................... 170
  5.3.1 Effect of dosages of TiO₂ and ZnO ...................................................... 171
  5.3.2 Effect of pH .................................................................................... 173
  5.3.3 Effect of H₂O₂ on the degradation .................................................... 174
  5.3.4 Effect of Fenton reagent on the degradation .................................... 176
  5.3.5 Effect of peroxydisulphate on the degradation ............................... 182
  5.3.6 Effect of anions and cations ............................................................ 195
  5.3.7 Effect of thickness of plastic sheet .................................................. 199
  5.3.8 Effect of combination of pollutants on the degradation of individual components .............................................................. 199
  5.3.9 Mechanism of the photolytic/photocatalytic degradation of polyvinyl chloride ................................................................. 203
5.4 Conclusions ............................................................................................ 207

Chapter 6
SOLAR PHOTOLYSIS AND OTHER ADVANCED OXIDATION PROCESSES FOR THE DEGRADATION OF POLYETHYLENE AND POLYVINYL CHLORIDE PLASTICS ......................................................................................... 209 - 248
6.1 Introduction ............................................................................................ 209
6.2 Materials and Methods .......................................................................... 211
  6.2.1 Materials ......................................................................................... 211
  6.2.2 Experimental set up ......................................................................... 211
6.3 Results and Discussion .......................................................................... 212
List of Tables

Table 1.1 Common plastics resin code, characteristics and applications ................................................................. 08
Table 1.2 Plastic consumption worldwide.................................................. 11
Table 1.3 Approximate quantity of different types of plastic used over the years (in '000 tons)......................................................... 11
Table 1.4 Oxidation potential of common oxidizing agents. .............. 36
Table 1.5 Summary of the major homogeneous photocatalytic processes............................................................... 40
Table 2.1 Properties of TiO$_2$................................................................. 57
Table 2.2 Properties of Zinc oxide .......................................................... 60
Table 2.3 Properties of K$_2$S$_2$O$_8$ .......................................................... 61
Table 2.4 Properties of H$_2$O$_2$ ................................................................. 62
Table 3.1 Income category and age of members of individual family who participated in the survey ................................. 73
Table 3.2 Selected questions in the questionnaire related to the general awareness of plastics and the answers provided by the respondents................................................................. 86
Table 3.3 Responses to the questions related to the disposal of plastic waste ................................................................. 88
Table 3.4 Responses to the questions related to the awareness of the hazards of plastic products ................................. 89
Table 3.5 Responses to the questions related to what individuals can do to reduce related plastic related hazards ................ 91
