List of Tables

Table 1.1: Various approaches proposed for Rule Extraction from SVM .............. 10

Table 3.1: Average Results on Validation set ..................................................... 36
Table 3.2: Fuzzy Rules Extracted using Iris Dataset ........................................... 36
Table 3.3: Sample Fuzzy Rules Extracted using Wine Dataset ......................... 36
Table 3.4: Bankruptcy prediction dataset division into Training and Validation ..... 37
Table 3.5: Average results for Spanish Banks on Validation Set ....................... 37
Table 3.6: Fuzzy rules extracted for Spanish banks dataset .............................. 38
Table 3.7: Average results for Turkish Banks on Validation Set ....................... 38
Table 3.8: Fuzzy Rules Extracted for Turkish Banks dataset ............................ 39
Table 3.9: Average results for US Banks on Validation Set ............................. 39
Table 3.10: Fuzzy rules extracted for US banks dataset ................................... 40
Table 3.11: AUC of the classifiers ..................................................................... 40
Table 3.12: Fidelity of various hybrids .............................................................. 41

Table 4.1: Classification dataset Information ..................................................... 47
Table 4.2: Bankruptcy prediction dataset division into Training and Validation ..... 48
Table 4.3: Average results obtained using IRIS data ........................................ 50
Table 4.4: Rule set extracted using SVM+CART (Case-P) for Iris data (all features) ........................................................................................................ 50
Table 4.5: Average results using all and reduced features of Wine data ............. 51
Table 4.6: Rule set extracted using SVM+CART (Case-P) for Wine data (8 features) ........................................................................................................................................................................ 51

Table 4.7: Average results using all and reduced features of WBC data ................................. 53

Table 4.8: Rule set extracted using SVM+CART (Case-P) for WBC data (5 features) ........................................................................................................................................................................................................... 53

Table 4.9: Average results using all and reduced features of Spanish banks data ... 54

Table 4.10: Rule set extracted using SVM+CART (Case-P) for Spanish banks data (6 features) ................................................................................................................................................................................................................................. 55

Table 4.11: Average results using all and reduced features of Turkish banks data .. 56

Table 4.12: Rule set extracted using SVM+DT (Case-P) for Turkish banks data (8 features) ........................................................................................................................................................................................................... 56

Table 4.13: Average results of US banks dataset ........................................................................ 57

Table 4.14: Rule set extracted using SVM+CART (Case-P) for US banks data (all features) ................................................................................................................................................................................................................................. 57

Table 4.15: Average results using all and reduced features of UK banks data ........ 58

Table 4.16: Rule set extracted using SVM+CART (Case-P) for UK banks data (6 features) ................................................................................................................................................................................................................................. 59

Table 4.17: Average Fidelity of SVM+DT and SVM+CART hybrids ......................... 59

Table 4.18: Average RMSE obtained using all and reduced features of Auto MPG dataset ................................................................................................................................................................................................................................. 61

Table 4.19: Sample Rule set extracted using SVR+CART (Case-P) for Auto MPG dataset (3 features) ................................................................................................................................................................................................................................. 61

Table 4.20: Average RMSE obtained using all and reduced features of Body fat dataset ................................................................................................................................................................................................................................. 61

Table 4.21: Rule set extracted using SVR+DENFIS (Case-P) for Body Fat dataset (5 features) ................................................................................................................................................................................................................................. 62

Table 4.22: Average RMSE obtained using all and reduced features of Boston Housing dataset ................................................................................................................................................................................................................................. 62

Table 4.23: Sample Rule set extracted using SVR+CART (Case-P) for Boston Housing dataset (all features) ................................................................................................................................................................................................................................. 63
Table 4.24: Average RMSE obtained using all and reduced features of Forest Fires dataset ......................................................... 63

Table 4.25: Sample Rule set extracted using SVR+CART (Case-P) for Forest Fires dataset (7 features) ....................................................... 64

Table 4.26: Average RMSE obtained using all and reduced features of Pollution dataset ........................................................................... 64

Table 4.27: Rule set extracted using SVR+CART (Case-P) for Pollution dataset (all features) ............................................................... 65

Table 5.1: Average results obtained using original unbalanced data ..................... 79

Table 5.2: Average results obtained using 25% under-sampled data .................... 80

Table 5.3: Average results obtained using 50% under-sampled data .................... 80

Table 5.4: Average results obtained using 100% over-sampled data ................... 81

Table 5.5: Average results obtained using 200% over-sampled data ................... 82

Table 5.6: Average results obtained using 300% over-sampled data ................... 82

Table 5.7: Average results obtained using 25% under+100% over sampled data .... 83

Table 5.8: Average results obtained using 50% under+200% over sampled data .... 83

Table 5.9: Average results obtained using SMOTE ........................................... 84

Table 5.10: Rule set extracted using SMOTE data with reduced features .......... 85

Table 5.11: Average fidelity of the proposed SVM+NBTtree using Case-SP ....... 85

Table 6.1: Feature Information of the Insurance data used (Pyle 1999) ................. 95

Table 6.2: Feature Information of the pre-processed Insurance data ................. 96

Table 6.3: Average Results of Churn Prediction SVM+NBTtree (500 Extra Instances) ............................................................................. 99

Table 6.4: Average Results of Churn Prediction SVM+NBTree (1000 Extra Instances) ............................................................................. 99
