List of tables

Chapter I:
Table 1.1 Ranking of electrolyte material based on major attributes:

Chapter II:
Table 2.1 Relative pressure, Quantity adsorbed and $1/ Q [(P_0 / P) − 1]$ obtained from BET experiment
Table 2.2 Chemical Compositions 8YSZ-Tosoh powder
Table 2.3 Classification of Cohesion Index (CI)
Table 2.4 Cohesion Index (CI) values
Table 2.5 Compaction pressure, specimen dimensions and green density of the samples
Table 2.6 Details of solid loading, additives and results of viscosity
Table 2.7 Solid loading, specimen dimensions and green density of the samples
Table 2.8 Solid Loading, specimen dimensions and green density of the samples
Table 2.9 Cell parameters of green honeycomb samples of 8YSZ
Table 2.10 Properties of sintered honeycombs and solid sample of 8YSZ
Table 2.11 Comparative evaluation of the shaping process

Chapter III:
Table 3.1 Sintering parameters and results of the CRH sintered 8YSZ samples
Table 3.2 Sintering parameters, densities and sintered grain sizes of 8YSZ samples densified using CRH methodology
Table: 3.3(b) EDS analysis of 8YSZ sample sintered by CRH sintering method
Table 3.4 Temperature Regimes for RCS Schedule
Table 3.5 Temperature Regimes and shrinkage rate for RCS Schedule
Table 3.6 Sintering parameters and results of the Rate Controlled sintered 8YSZ samples
Table 3.7 Density evolution of 8YSZ samples during RCS process.
Table 3.8 Sintering parameters and results of the Two Stage sintered 8YSZ samples.
Table 3.9 Sintering parameters, densities and sintered grain sizes of 8YSZ samples densified using TSS methodology.
Table 3.10 Density, average grain size details of 8YSZ at each stage of TSS.
Table 3.11 Sintering parameters and results of the MW Sintered 8YSZ samples
Table 3.12 Sintering parameters, densities and sintered grain sizes of 8YSZ samples densified using MWS methodology

Table 3.13 Sintering parameters and results of the Spark Plasma sintered 8YSZ samples

Table 3.14 Sintering parameters, densities and sintered grain sizes of 8YSZ samples densified using SPS methodology.

Table 3.15 Sintering methodologies, optimum parameters and results

Chapter IV:

Table 4.1 Details of the specimens subjected to Impedance measurement

Table 4.2 Ionic conductivities of the specimens in the temperature range 300-800°C

Table 4.3 Specific grain boundary conductivities of the specimens

Table 4.4 Sintering parameters and results of the of SPS sintered 8YSZ specimens

Table 4.5 Blocking factor ($\alpha_R$) measured at 800°C for 8YSZ samples sintered through different sintering methods

Table 4.6 Sintering parameters and results of the of SPS sintered 8YSZ specimens (MKnano)

Table 4.7 Specification of NiO- 8YSZ anode powder

Table 4.8 Sintering studies of NiO-8YSZ anode

Table 4.9 Density and porosity of Ni-8YSZ anode after reduction

Table 4.10 Specifications of LSM cathode Paste
