List of Figures

Figure 4.1. Schematic diagram of the compaction die and punch----------------------- 22
Figure 4.2. Photograph of the process of compaction of elemental powder mix------ 22
Figure 4.3. Compressibility plots for various alloys------------------------------- 23
Figure 4.4 Schematics of the sintered preforms before and after upsetting---------27
Figure 4.5.a. Photograph showing the cold upsetting process-----------------------27
Figure 4.5.b. Photograph showing the cold upset forged specimens------------------27
Figure 4.6 Photograph of the hot upset forged specimen--------------------------28
Figure 5.1. Elementary neuron with R inputs----------------------------------------32
Figure 5.2. Three-layer- feed forward back propagation neural network
architecture---------------------------------------------------------------------34
Figure 5.3. Simulink model diagram of cold upset forging and cold repressing------37
Figure 5.4. Simulink model diagram of hot upsetting-------------------------------38
Figure 5.5. Regression analysis plots of axial stress, true height strain, percentage
theoretical density, stress formability index and strain formability index
for cold upset forged Fe-0.2% C P/M steels----------------------------------------39
Figure 5.6. Regression analysis plots of axial stress, true height strain, percentage
theoretical density, stress formability index and strain formability index
for cold upset forged Fe-0.2% C-2% Ni P/M steels---------------------------------40
Figure 5.7. Regression analysis plots of axial stress, true height strain, percentage
theoretical density, stress formability index and strain formability index
for cold upset forged Fe-0.2% C-2% Ni-1.5% Mo P/M steels------------------------41
Figure 5.8. Regression analysis plots of axial stress, true height strain, percentage
theoretical density, stress formability index and strain formability index
for cold upset forged Fe-0.2% C-2% Ni-3% Mo P/M steels------------------------42
Figure 5.9. Regression analysis plots of axial stress, true height strain, percentage
theoretical density, stress formability index and strain formability index
for cold upset forged Fe-0.2% C-1% Cr P/M steels-------------------------------43
Figure 5.10. Regression analysis plots of axial stress, true height strain, percentage theoretical density, stress formability index and strain formability index for cold upset forged Fe-0.2% C-2% Cr P/M steels.

Figure 5.11. Regression analysis plots of axial stress, true height strain, percentage theoretical density, stress formability index and strain formability index for cold upset forged Fe-0.2% C-1% Cr-2% Ni P/M steels.

Figure 5.12. Regression analysis plots of axial stress, true height strain, percentage theoretical density, stress formability index and strain formability index for cold upset forged Fe-0.2% C-1% Cr-2% Ni-1.5% Mo P/M steels.

Figure 5.13. Regression analysis plots of axial stress, true height strain, percentage theoretical density, stress formability index and strain formability index for cold repressed Fe-0.2% C P/M steels.

Figure 5.14. Regression analysis plots of axial stress, true height strain, percentage theoretical density, stress formability index and strain formability index for cold repressed Fe-0.2% C-2% Ni P/M steels.

Figure 5.15. Regression analysis plots of axial stress, true height strain, percentage theoretical density, stress formability index and strain formability index for cold repressed Fe-0.2% C-2% Ni-1.5% Mo P/M steels.

Figure 5.16. Regression analysis plots of axial stress, true height strain, percentage theoretical density, stress formability index and strain formability index for cold repressed Fe-0.2% C-2% Ni-3% Mo P/M steels.

Figure 5.17. Regression analysis plots of axial stress, true height strain, percentage theoretical density, stress formability index and strain formability index for cold repressed Fe-0.2% C-1% Cr P/M steels.

Figure 5.18. Regression analysis plots of axial stress, true height strain, percentage theoretical density, stress formability index and strain formability index for cold repressed Fe-0.2% C-2% Cr P/M steels.

Figure 5.19. Regression analysis plots of axial stress, true height strain, percentage theoretical density, stress formability index and strain formability index for cold repressed Fe-0.2% C-1% Cr-2% Ni P/M steels.

Figure 5.20. Regression analysis plots of axial stress, true height strain, percentage theoretical density, stress formability index and strain formability index for cold repressed Fe-0.2% C-1% Cr-2% Ni-1.5% Mo P/M steels.
Figure 5.21. Regression analysis plots of axial stress, true height strain, percentage theoretical density, stress formability index and strain formability index for hot upset forged Fe-0.2% C P/M steels-------------------------- 55

Figure 5.22. Regression analysis plots of axial stress, true height strain, percentage theoretical density, stress formability index and strain formability index for hot upset forged Fe-0.2% C-2% Ni P/M steels------------------ 55

Figure 5.23. Regression analysis plots of axial stress, true height strain, percentage theoretical density, stress formability index and strain formability index for hot upset forged Fe-0.2% C-2% Ni-1.5% Mo P/M steels------56

Figure 5.24. Regression analysis plots of axial stress, true height strain, percentage theoretical density, stress formability index and strain formability index for hot upset forged Fe-0.2% C-2% Ni-3% Mo P/M steels--------56

Figure 5.25. Regression analysis plots of axial stress, true height strain, percentage theoretical density, stress formability index and strain formability index for hot upset forged Fe-0.2% C-1% Cr P/M steels------------------57

Figure 5.26. Regression analysis plots of axial stress, true height strain, percentage theoretical density, stress formability index and strain formability index for hot upset forged Fe-0.2% C-2% Cr P/M steels------------------57

Figure 5.27. Regression analysis plots of axial stress, true height strain, percentage theoretical density, stress formability index and strain formability index for hot upset forged Fe-0.2% C-1% Cr-2% Ni P/M steels---------58

Figure 5.28. Regression analysis plots of axial stress, true height strain, percentage theoretical density, stress formability index and strain formability index for hot upset forged Fe-0.2% C-1% Cr-2% Ni-1.5% Mo P/M steels------------------------------------------------------------------------58

Figure 5.29. Plots of experimental and predicted (ANN) values of axial stress, true height strain, percentage theoretical density, stress formability index and strain formability index for cold upset forged Fe-0.2% C steel.------------------------------------------------------------------------------59

Figure 5.30. Plots of experimental and predicted (ANN) values of axial stress, true height strain, percentage theoretical density, stress formability index and strain index for cold upset forged Fe-0.2% C-2% Ni steel----------------------------------------------------------------- 60
Figure 5.31. Plots of experimental and predicted (ANN) values of axial stress, true height strain, percentage theoretical density, stress formability index and strain formability index for cold upset forged Fe-0.2% C-2% Ni-1.5% Mo steel----------------------------------- 60

Figure 5.32. Plots of experimental and predicted (ANN) values of axial stress, true height strain, percentage theoretical density, stress formability index and strain formability index for cold upset forged Fe-0.2% C-2% Ni-3% Mo steel-------------------------------------------------61

Figure 5.33. Plots of experimental and predicted (ANN) values of axial stress, true height strain, percentage theoretical density, stress formability index and strain formability index for cold upset forged Fe-0.2% C-1% Cr steel------------------------61

Figure 5.34. Plots of experimental and predicted (ANN) values of axial stress, true height strain, percentage theoretical density, stress formability index and strain formability index for cold upset forged Fe-0.2% C-2% Cr steel-----------------------------------------------------------62

Figure 5.35. Plots of experimental and predicted (ANN) values of axial stress, true height strain, percentage theoretical density, stress formability index and strain formability index for cold upset forged Fe-0.2% C-1% Cr-2% Ni steel--------------------------------------------------62

Figure 5.36. Plots of experimental and predicted (ANN) values of axial stress, true height strain, percentage theoretical density, stress formability index and strain formability index for cold upset forged Fe-0.2% C-1% Cr-2% Ni-1.5% Mo steel--------------------------------------63

Figure 5.37. Plots of experimental and predicted (ANN) values of axial stress, true height strain, percentage theoretical density, stress formability index and strain formability index for cold repressed Fe-0.2% C steel--- 63

Figure 5.38. Plots of experimental and predicted (ANN) values of axial stress, true height strain, percentage theoretical density, stress formability index and strain formability index for cold repressed Fe-0.2% C-2% Ni steel----------------------------------------------------------64

Figure 5.39. Plots of experimental and predicted (ANN) values of axial stress, true height strain, percentage theoretical density, stress formability index and strain formability index for cold repressed Fe-0.2% C-2% Ni-1.5% Mo steel-----------------------------------------------64
Figure 5.40. Plots of experimental and predicted (ANN) values of axial stress, true height strain, percentage theoretical density, stress formability index and strain formability index for cold repressed Fe-0.2% C-2% Ni-3% Mo steel----------------------------------65

Figure 5.41. Plots of experimental and predicted (ANN) values of axial stress, true height strain, percentage theoretical density, stress formability index and strain formability index for cold repressed Fe-0.2% C-1% Cr steel----------------------------------65

Figure 5.42. Plots of experimental and predicted (ANN) values of axial stress, true height strain, percentage theoretical density, stress formability index and strain formability index for cold repressed Fe-0.2% C-2% Cr steel----------------------------------66

Figure 5.43. Plots of experimental and predicted (ANN) values of axial stress, true height strain, percentage theoretical density, stress formability index and strain formability index for cold repressed Fe-0.2% C-1% Cr-2% Ni steel----------------------------------66

Figure 5.44. Plots of experimental and predicted (ANN) values of axial stress, true height strain, percentage theoretical density, stress formability index and strain formability index for cold repressed Fe-0.2% C-1% Cr-2% Ni-1.5% Mo steel----------------------------------67

Figure 5.45. Plots of experimental and predicted (ANN) values of true height strain, percentage theoretical density for hot upset forged steels---------68

Figure 5.46. Simulink model diagram for cold upsetting of Fe-C-Cr preforms-------69

Figure 5.47. Plots of experimental and predicted (ANN) values of the deformed diameter and height----------------------------------------------------------70

Figure 5.48. Simulink model diagram for Fe-C-Ni-Mo cold upset forged preforms-------------------------------------------------------------70

Figure 5.49. Plots of experimental and predicted (ANN) values of deformed diameter and height----------------------------------------------71

Figure 6.1 Plots of axial stress vs. true height strain of sintered and cold upset Fe-C-Ni-Mo low alloy steel preforms-----------------------------79

Figure 6.2 Plots of axial stress vs. true height strain of sintered and cold upset Fe-C-Cr-Ni-Mo low alloy steel preforms-----------------------------79
Figure 6.3. Plots of axial stress vs. percentage theoretical density of sintered and cold upset Fe-C-Ni-Mo low alloy steel preforms-----------------------------83

Figure 6.4. Plots of axial stress vs. percentage theoretical density of sintered and cold upset Fe-C-Cr-Ni-Mo low alloy steel preforms------------------- 83

Figure 6.5. Plots of percentage theoretical density vs. true height strain of sintered and cold upset Fe-C-Ni-Mo low alloy steel preforms---------- 84

Figure 6.6. Plots of percentage theoretical density verses true height strain of sintered and cold upset Fe-C-Cr Ni-Mo low alloy steel preforms------84

Figure 6.7. Fracture limit plot of Fe-C-Cr-Ni-Mo low alloy cold upset forged P/M steels-------------------------------------------------------------87

Figure 6.8. Plots of axial stress vs. percentage theoretical density of sintered and cold repressed Fe-C-Ni-Mo low alloy steel preforms----------89

Figure 6.9. Plots of axial stress vs. true height strain of sintered and cold repressed Fe-C-Cr-Ni-Mo low alloy steel preforms----------------------90

Figure 6.10. Plots of axial stress vs. percentage theoretical density of sintered and cold repressed Fe-C-Ni-Mo low alloy steel preforms----------------92

Figure 6.11. Plots of axial stress vs. percentage theoretical density of sintered and cold repressed Fe-C-Cr-Ni-Mo low alloy steel preforms-------------------92

Figure 6.12. Plots of percentage theoretical density vs. true height strain of sintered and cold repressed Fe-C- Ni-Mo low alloy steel preforms-------93

Figure 6.13. Plots of percentage theoretical density vs. true height strain of sintered and cold repressed Fe-C-Cr- Ni-Mo low alloy steel preforms---------93

Figure 6.14. Plots of percentage theoretical density vs. true height strain of sintered and hot upset Fe-C- Ni-Mo low alloy steel preforms---------97

Figure 6.15. Plots of percentage theoretical density vs. true height strain of sintered and hot upset Fe-C-Cr- Ni-Mo low alloy steel preforms---------97

Figure 6.16. Comparison of limiting plastic deformation during various forging tests---------------------------------------------------------98

Figure 6.17. Comparison of limiting densification during various forging tests-------------------------------------------------------------99

Figure 6.18. Photomicrographs of Fe-0.2% C P/M steel---------------------------------102
