

# Acknowledgements

Every Ph.D. student hopes for an excellent advisor and somehow I was lucky enough to get two. I am very grateful for having had the opportunity to work with both Dr. Ajay Kumar Shrivastav and Dr. Pramod Kumar Agarwal. Throughout the research and writing of my dissertation they have been helpful, supportive and have provided encouragement precisely when it was most needed. One could imagine that having two advisors could produce some friction between the two but there was never even a hint of such difficulties. They provided me with two very strong role models as I head off to academia and to my eventful responsibilities, as an advisor.

I would like to give my sincere appreciation to Dr. Shashi Bhushan (Prof. and Head, Department of Physiology) and Dr. H. C. Tondon (Professor, Department of Physiology) of this Medical College for their invaluable advice, constructive suggestions and were ever ready to discuss my problems.

I would also like to thank Prof. R. B. Nigam (Director, NSI, Kanpur) and Dr. Mahendra Prasad (Former Director, NSI, Kanpur) for extending not only financial grants but all the facility which could be possible in NSI. I thank Dr. Santosh Kumar (Junior Scientific Officer, Biochemistry Division, NSI) for several useful suggestions on liquors.

I particularly want to thank Dr. S. G. Dhandhe (Professor, Mechanical Engineering and Dean, Research and Development, IIT Kanpur) for bailing me out by extending financial support to conduct experiments in the FEAT laboratory of IIT Kanpur. I would also like to thank Dr. Padma S. Vankar and Mrs. Rashmi Sanghi for helping me out in conducting experiments in FEAT Lab.

I would be remiss if I did not also mention Mr. Neeraj Sharma and Miss Sunita for their kind help and allowing me to use their expertise.

I offer a special word of thanks to Mr. Fakire (Helper, Department of Physiology) for taking care and helping me to handle rats.

I would like to thank my family, who right from the start encouraged me to aim high, celebrated my successes with me, taught me to learn from and laugh at my failures, and perhaps most importantly, to laugh at myself. I would like to thank especially my husband Sanjeev Mishra, who has taught me so much. Throughout this project he has been there in spite of his own busy schedule, always with words of encouragement, always with patience, and always with a smile. I would also like to thank my sweet daughters Snigdha and Shubhra for providing least disturbances and helping me in their own little ways.

During difficult times, I received the necessary Grace from the Almighty, strengthening my Faith in God.

I am indebted to the Government of Rajasthan and Medical College Kota for giving me study leave. I am also grateful to staff members and colleagues at Department of Biochemistry, Department of Physiology (GVSM Medical College, Kanpur) and Biochemistry Division, NSI, Kanpur for providing all the necessary facilities that we all too often take for granted.

Finally, there is no better way to conclude this dissertation than to thank once again, all the people who have helped me along the way.

Date: 11.06.2001
