

LIST OF FIGURES

Fig. No.	Title	Page No.
2.1	Sites of stone in urinary passages	9
2.2	Skiogram showing uretric stone pieces at different sites in the urinary passages after lithotripsy	9
2.3	Skiogram showing urinary bladder stone	9
2.4	Kidney stone of calcium oxalate	10
2.5	Calcium ion kinetics and homeostasis	18
2.6	Oxalate supply and kinetics: crucial role in formation of insoluble calcium oxalate crystals	19
2.7	Phosphate ion kinetics and its utility	22
2.8	Interaction between free radicals and target	36
2.9	Generation of reactive oxygen species by mitochondrial cytochrome oxidase system	40
2.10	Nitric oxide (NO): Precursor of NO ₂ oxy free radical	41
2.11	Balancing of oxidants and antioxidants	42
2.12	Formation of reactive oxygen species and lipid biomembrane damage	46
2.13	Interaction and synergism between antioxidant enzyme system operating in the lipid phase (membrane) and the aqueous phase (cytosol) of the cell	52
2.14	Proposed catalytic mechanism of glutathione peroxidase	54
2.15	Structure of α -tocopherol	59
2.16	β -carotene and unusual type of lipid antioxidant	63
2.17	Redox recycling stages and α -lipoic acid (ALA) chain reaction	64
2.18	Free radicals and antioxidant interactions	68
2.19	Major isolated structural constituents of Shilajit	73
3.1(a)	Finger prints of benzopyrones and fulvic acids components of Shilajit	78
3.1(b)	Finger prints of various fulvic acids present in Shilajit	78
4.1	Ultrasound picture before and after treatment with Shilajit and Dolichos biflorus	123
5.1	Possible sites of action of Shilajit in glyoxylate-glycine-ATP cascade	145
5.2	Possible mechanism of action of Shilajit breaking hyperoxaluric-free-radical stone forming cascade	149
