Acknowledgement

I will start by a popular quote by William Henry who has very rightly said, “What is research, but a blind date with knowledge.” You want to, but can’t get away from the blind date.

Arthur D. Little said, “Research serves to make building stones out of stumbling blocks.” It gives me immense pleasure having this space and the opportunity to express my gratitude to the people who have been an integral part during my journey through PhD.

It gives me immense pleasure to express my gratitude to my supervisor and co-supervisors. My supervisor, Dr Sudha Prasad has been extremely supportive. Her immense commitment towards work has truly been the driving force. Infact, her hardworking nature has been a great motivation through and through.

My co-supervisor Dr Arvind Rai has been a great mentor. His critical eye has helped to get the best out of me. More than anything else, his confidence in me motivated me to work even harder.

The immense cooperation and constant guidance of Dr Sunil Gupta was a great help in completing my thesis work.

I offer my gratitude to DS Rawat sir who helped me with innumerable things and ways. The times spent with him sharing my disappointments and joys were invaluable. It is always great to talk to him.

My sincere thanks to Dr Ashok Agarwal, Dean, MAMC and Dr L.S. Chauhan, Director, NCDC for permitting me to carry-out the research.

I am highly grateful to Dr Sanjay Negi for always motivating, supporting and encouraging me to work hard. The discussions in the initial days were very important and helped me a great deal in completion of this thesis.

I express my sincere gratitude to Dr Shalini C. Khanna who has been a great friend, more so than a teacher. Her immense support and help during analysis of data has been instrumental in shaping the thesis.
I extend my thanks to Dr SS Grover and Mr RS Rautella and Dr Renu Tanwar for their help and advice.

I thank all the people from IVF Centre, Dr Rupali, Dr Neha, Bhupender, Susan, Sister Johnson, Sister Kiran, Sister Sheel, Sister Gimmy, Sister Neelam and Yogesh for the wonderful time we had during the breaks. I also extend my gratitude to Dr P.K. Dhamija who helped me with the statistical analysis.

I acknowledge the staff of Division of Biochemistry and Biotechnology and staff of Tuberculosis laboratory for their all time help.

I would like to extend my gratitude to Anjana ma’am for wonderful times spent together. She was a constant support and always lent a sympathetic ear to my joys and sorrows.

I am grateful to all the patients for giving their consent for the study.

It gives me a pleasure to thank my colleagues Sachin, Hanuram, Supriya, Renu, Saaransh, Steffi, Uma ma’am, Poonam, Artee ma’am, Pankaj and Priyanka ma’am with whom I shared the tumultuous times. The thought provoking discussions aided greatly in our outings and parties. They had a pivotal role in making the lab an attractive place to work. Special thanks to my dear friend Satbir for her timely help.

I am indebted to my family members, my sisters Surbhi and Ghata, my jijus, Ashish and Shashwat for their unconditional love, affection and understanding. The outings and the hilarious sessions they subjected me to were so much fun and such great stress busters.

Special thanks to my naughty nephew, Mithu, for giving me refreshing moments with his cute antics and adorable fights with bay blades.

Above all, I wish to acknowledge from the bottom of my heart, my parents, my mother Mrs Bina Singhal and my father Mr Ashok K. Singhal all their sacrifices; for their unconditional and constant love; for inculcating a sense of commitment towards work. What I feel for them is probably inexplicable and cannot be put down to words. I am blessed to have them in my life.

Lastly, I thank the almighty for his blessings without which I have no existence.

Thank you everyone!!!! 😊

Megha Singhal
