Acknowledgements

This is perhaps the easiest and hardest chapter that I have to write. It will be simple to name all the people who helped me to get this done, but it will be tough to thank them enough.

In the first place I would like to express my sincere gratitude to Prof. Dileep N. Deobagkar for his patience, encouragement, guidance and help throughout the duration of the work. His ideas, suggestions and the questionnaires helped me to think independently. His logical way of solving problems, innovativeness and endless energy has always inspired me. His insistence on finding the failure of an experiment taught me a lot. Sincere thanks are also due to Prof. Deepti D. Deobagkar my co-guide and former Head, Department of Zoology, University of Pune, for useful discussions, encouragement and for making the things promptly available throughout my work.

I would like to thank Prof. Saroj Ghaskadbi, Head of the Department of Zoology, for giving me complete freedom and providing me access to all the facilities in the Department. I am also grateful to Dr. B. B. Nath for useful discussions in Drosophila genetics. I am also thankful to all other teaching staff for their timely help. I gratefully acknowledge the help of Dr. L. S. Shashidhara, Center for Cellular and Molecular Biology (Hyderabad) for making me available the Drosophila fly lab, Drosophila stocks and all the needed facilities, the results of which form an important part of my thesis. I am thankful to Prof. Krishnashastr i from National Centre for Cell Science (NCCS) for providing me the Confocal Microscope facility. I thank for the enthusiasm, patience and help given by Ms. Ashwini at NCCS for the confocal imaging and analysis. I owe my special thanks to Dr. M. V. N. Shirodkar for helping me to start my career in science.

The non-teaching staff of the Department had been very cooperative all the time and I would specially like to mention the names of Ms. Anjali from the stores department and Mrs. Khankar for providing me the Drosophila fly food.
Acknowledgements

Friends and colleagues are the ones who always share ups and downs and are always ready for the help. I appreciate the help, encouragement and friendliness of my colleagues Aarti, Sonali, Anita, Shruti, Nayana, Chitra, Swati, Gauri, Ashwin, Sanjay, Mandar and Shrihari. Thanks to all of them for their support and help during the days I needed it the most. Special thanks to Mandar, who really helped me in using various computer applications. I appreciate the help of Chitra and Avinash in the final stages of thesis printing. I would also like to thank Swati and Swapnil for their kind cooperation.

My parents, Mumma and Baba have always been pillars of support and love, without whom this task was impossible. They did things which were beyond their limits to help me. They were very understanding, cooperative and considerate during all my difficulties. They have not let me get distracted from my goals during periods of hardships. Thanks to my husband Gireesh who was really very patient and understanding for last two years. I cannot forget the love and affection of my brother Tablee and sister Tina, who have always appreciated my efforts and were of great moral support. Last but not the least my nephew Inu and my little angel Shampoo were very helpful in relaxing my tensions during the period of frustrations. The best way to thank them all would be to dedicate my efforts and this thesis to them. I would also like to pay my gratitude to our pet dog late Rucci for adjusting without my mumma for four months and my bike for always being there with me.

During the period of this work, I have been a recipient of Junior and Senior Research Fellowship from the Council of scientific and Industrial Research (CSIR), India.

Lastly I would thank GOD for patience, strength and everything that kept me going on.

Suneeta Koli
