ACKNOWLEDGEMENT

It is a pleasure to thank the countless people who made this thesis possible.

It is difficult to overstate my gratitude to my mentor and Ph.D. supervisor, Dr. Monsingh D. Devadas, Chairman, Faculty of Architecture and Planning, Anna University, Chennai. I am deeply indebted him for his help, stimulating suggestions and encouragement during the period of this research and writing of the thesis. I am thankful and obliged to my Doctoral Committee members, Prof. A. Mohamed Harris, Architect and Dr. V.R. Muraleedharan, Professor and Head-Department of Humanities and Social Sciences, IIT, Chennai, for providing valuable suggestions and directions without which the research would not be the same.

I wish to thank Prof. S. Ravi, Dean-Campus and Dr. Ranee Vedamuthu, Head of the Department, Architecture, School of Architecture and Planning, Anna University, for providing support and encouragement during the final stage of my research.

My special thanks are due to the medical staff, relatives and especially the patients, who inspite of their illness and trauma took part in the research study; without them the research is meaningless. My heartfelt thanks extend to numerous doctors, hospital administrators, architects, interior designers and engineers who gave their time, knowledge and resources throughout my research period.

I am ever-thankful to all my family members, particularly my husband, my son and my daughter for their enduring patience, understanding and support. Lastly, I wish to thank my parents, for their unconditional love and care provided to our family.

(P. MEENA KUMARI)
