LIST OF FIGURES

Figure 1: Plot of optimal order quantities against different values of price.

Figure 2: Plot of optimal order quantities against different salvage values.

Figure 3: Plot of optimal order quantities against different values of penalty costs.

Figure 4: Plot of optimal order quantities against different values of inventory holding costs.

Figure 5: Plot of optimal order quantities against different values of mean yield of the minimum cost supplier.

Figure 6: Plot of optimal order quantities against different values of standard deviation of the yield distribution of the minimum cost supplier.

Figure 7: Plot of optimal order quantities against different values of price.

Figure 8: Plot of optimal order quantities against different values of penalty costs.

Figure 9: Plot of optimal order quantities against different values of inventory holding costs.

Figure 10: Plot of optimal order quantities against different values of mean yield of the minimum cost supplier.

Figure 11: Plot of optimal order quantities against different values of standard deviation of the yield distribution of the minimum cost supplier.
LIST OF TABLES

Table 1: Revenue and Cost Items for the Single Period Problem

Table 2: Revenue and Cost Items for the Multi-Period Problem for jth period (j<N)

Table 3: Revenue and Cost Items for the Multi-Period Problem for Nth period

Table 4: Values of the input parameters of the base case

Table 5: Notations used by Ramasesh et al. (1991)

Table 6: Notations used by Kouvelis and Li (2008)

Table 7: Notations used by Bassok and Akella (1991)

Table 8: Notations used by Anupindi and Akella (1993)

Table 9: Notations used by Agrawal and Nahmias (1997) for identical supplier problem

Table 10: Notations used by Agrawal and Nahmias (1997) for non-identical supplier problem

Table 11: Notations used by Dada et al. (2007)

Table 12: Notations used by Burke et al. (2009)

Table 13: Values of the input parameters of the base case

Table 14: Results of the dynamic programming for a 3-period model
