

# List of Figures

3.1	Layout of 2-element DGS MIMO antenna (top view and bottom view)	23
3.2	Hardware of 2-element DGS MIMO antenna . . . . .	23
3.3	Simulated return loss ( $S_{11}/S_{22}$ ) and insertion loss( $S_{12}/S_{21}$ ) against frequency for 2-element DGS MIMO antenna . . . . .	24
3.4	Impedance variation plots . . . . .	24
3.5	Simulated VSWR against frequency for 2-element DGS MIMO antenna	25
3.6	Measured return loss ( $S_{11}$ ) characteristics for 2-element DGS MIMO antenna . . . . .	26
3.7	Measured isolation ( $S_{12}$ ) characteristics for 2-element DGS MIMO antenna	26
3.8	Radiation characteristics of for 2-element DGS MIMO antenna . . . . .	27
3.9	Gain characteristics of for 2-element DGS MIMO antenna . . . . .	28
3.10	Scalar current distribution of 2-element DGS MIMO antenna . . . . .	29
3.11	Evolution process of proposed 3-element MIMO antenna geometry . .	30
3.12	Comparison of simulated return loss characteristics for the various structures of 3-element antenna . . . . .	31
3.13	Configuration of 3-element MIMO antenna . . . . .	31
3.14	Isolation characteristics based on spatial distance between elements . .	32
3.15	Top and bottom view of fabricated 3-element MIMO antenna. . . . .	33
3.16	Simulated and measured return loss characteristics of 3-element MIMO antenna wrt port 1. . . . .	33
3.17	Simulated and measured isolation characteristics for 3-element MIMO antenna . . . . .	34
3.18	Measured and simulated insertion loss characteristics between port 1 and port 3 for 3-element MIMO antenna . . . . .	34

3.19	Measured and simulated insertion loss characteristics between port 2 and port 3 for 3-element MIMO antenna . . . . .	35
3.20	Simulated radiation patterns of for 3-element MIMO antenna at different resonance frequencies . . . . .	36
3.21	Simulated peak gain of for 3-element MIMO antenna antenna . . . . .	37
3.22	Simulated correlation coefficient for for 3-element MIMO antenna . . . . .	37
3.23	Scalar current distribution of 3-element high gain MIMO antenna . . . . .	38
4.1	Geometry of proposed spanner shape monopole MIMO antenna . . . . .	41
4.2	Isolation characteristics w.r.t. spatial distance between elements . . . . .	42
4.3	Front and back view of fabricated spanner shape MIMO antenna . . . . .	43
4.4	Comaprision of simulated and hardware characteristics of $S_{11}$ for spanner shape MIMO antenna . . . . .	43
4.5	Comaprision of simulated and hardware result of isolation for spanner shape MIMO antenna . . . . .	44
4.6	Surface current distribution for spanner shape MIMO antenna at different frequencies . . . . .	45
4.7	Diversity characteristics of spanner shape MIMO antenna . . . . .	45
4.8	Radiation pattern of spanner shape MIMO antenna at various frequencies . . . . .	46
4.9	Comparison of gain of MIMO antenna with single element structure . . . . .	47
4.10	Geometry of proposed 4-element MIMO antenna . . . . .	48
4.11	Fabricated 4-element MIMO antenna . . . . .	49
4.12	Measured and simulated $S_{11}$ characteristics of 4-element antenna . . . . .	49
4.13	Simulated and measured Isolation characteristics between port 2, 3 and 4 with respect to port 1 for 4-element antenna . . . . .	50
4.14	Simulated and measured Isolation characteristics between port 3 and 4 with respect to port 2 for 4-element antenna . . . . .	50
4.15	Simulated and measured isolation characteristics between port 3 and 4 for 4-element antenna . . . . .	51
4.16	Simulated radiation patterns (E-plane and H-plane)for 4-element antenna . . . . .	51
4.17	Simulated gain characteristics of 4-element antenna . . . . .	52
4.18	Simulated efficiency of 4-element antenna . . . . .	53

4.19	Surface current distribution characteristics for 4-element antenna (5.84 GHz) . . . . .	53
4.20	Simulated envelope correlation coefficients between different antenna elements for 4-element antenna . . . . .	54
4.21	Geometry of proposed MIMO antenna using DGS and parasitic element	55
4.22	Photograph of fabricated antenna using DGS and parasitic element: Top View and Bottom view . . . . .	57
4.23	Return loss ( $S_{11}$ ) response of the MIMO antenna using DGS and parasitic element (simulated and measured) . . . . .	58
4.24	Impedance variation plots . . . . .	58
4.25	Isolation loss ( $S_{12}$ ) response of the MIMO antenna using DGS and parasitic element(simulated and measured) . . . . .	59
4.26	Measurement of radiation characteristics of MIMO antenna using DGS and parasitic element in anechoic chamber . . . . .	60
4.27	E-plane and H-plane radiation pattern of MIMO antenna using DGS and parasitic element . . . . .	60
4.28	Simulated antenna gain using DGS and parasitic element when port 1 is excited . . . . .	61
4.29	Snapshot of practical measurement of gain of MIMO antenna using DGS and parasitic element at 5.8 GHz frequency . . . . .	61
4.30	Simulated efficiency of MIMO antenna using DGS and parasitic element	62
4.31	Envelope correlation coefficient of MIMO antenna using DGS and parasitic element when port 1 is excited at 5.8 GHz . . . . .	62
4.32	Scalar current distribution of MIMO antenna using DGS and parasitic element when port 1 is excited at 5.8 GHz . . . . .	63
5.1	Isolation characteristics w.r.t. spatial distance between elements . . . . .	66
5.2	Basic structure of single notch antenna . . . . .	67
5.3	Comparative study of VSWR for various slot structures . . . . .	67
5.4	Different antenna configurations for creation of dual notch characteristics . . . . .	68
5.5	Comparative study of VSWR by changing lengths and width of slot on feed line . . . . .	68

5.6	Fabricated MIMO antenna with dual notched characteristics . . . . .	69
5.7	Comparative study of simulated and measured VSWR for dual notched MIMO antenna . . . . .	70
5.8	Isolation characteristics for dual notched MIMO antenna . . . . .	70
5.9	Impedance variation plots for dual notched MIMO antenna . . . . .	71
5.10	Radiation characteristics for dual notched MIMO antenna(E-plane and H-plane . . . . .	71
5.11	Gain variation of dual notched MIMO antenna . . . . .	72
5.12	Radiation efficiency of dual notched MIMO antenna . . . . .	73
5.13	surface current distribution characteristics of dual notched MIMO antenna	74
6.1	Structure of 3-element MIMO antenna . . . . .	77
6.2	Fabricated prototype of 3-element slotted diversity antenna . . . . .	78
6.3	Testing using vector network analyzer ( $S_{11}$ and $S_{12}/S_{13}$ ) . . . . .	78
6.4	Comparative study of simulated and hardware results of $S_{11}$ for 3- element slotted diversity antenna . . . . .	79
6.5	Comparative study of simulated and hardware results of $S_{12} / S_{13}$ for 3-element slotted diversity antenna . . . . .	80
6.6	Comparison of radiation characteristics for 3-element slotted diversity antenna . . . . .	80
6.7	Simulated maximum gain of for 3-element slotted diversity antenna . .	81
6.8	Simulated surface current distribution of for 3-element slotted diversity antenna . . . . .	82
6.9	Simulated ECC (Envelope Correlation Coefficient) of for 3-element slot- ted diversity antenna . . . . .	82
7.1	Evolution steps of basic structure of 6-element MIMO antenna . . . . .	85
7.2	Evolution geometry of ground plane . . . . .	86
7.3	Comparison of return loss for various antenna configurations . . . . .	86
7.4	Comparison of isolation loss for various antenna configurations . . . . .	87
7.5	Geometry of 6-element MIMO antenna . . . . .	87
7.6	Comparison of simulated gain characteristics of different antenna con- figurations . . . . .	88

7.7	Hardware prototype of designed antenna . . . . .	89
7.8	Testing of S-parameters on VNA . . . . .	89
7.9	Simulated and measured return loss ( $S_{11}$ to $S_{66}$ ) . . . . .	90
7.10	Simulated and measured S-parameters ( $S_{61}$ , $S_{56}$ , $S_{34}$ ) [Isolation Measurement] . . . . .	92
7.11	Vector current distribution characteristics: 2 GHz . . . . .	92
7.12	Current distribution characteristics: 5 GHz . . . . .	92
7.13	Current distribution characteristics: 12 GHz . . . . .	93
7.14	Simulated ECC for 6-element antenna . . . . .	94
7.15	Radiation pattern measurements in semi-anechoic chamber . . . . .	94
7.16	(a, b, c) E-plane component at 2.4 GHz, 5.8 GHz and 12 GHz respectively (port 5 excited) (d, e, f) H-plane component at 2.4 GHz, 5.8 GHz and 12 GHz respectively (port 5 excited) . . . . .	95
7.17	( a, b, c) E-plane component at 2.4 GHz, 5.8 GHz and 12 GHz respectively (port 1 excited) (d, e, f) H-plane component at 2.4 GHz, 5.8 GHz and 12 GHz respectively (port 1 excited) . . . . .	95
7.18	Practical testing of 3-element MIMO antenna . . . . .	97
7.19	Screenshot of signal strength and data transfer rate of 3-element MIMO antenna . . . . .	98
7.20	Practical testing of 6-element MIMO antenna . . . . .	98
