ACKNOWLEDGEMENTS

A Ph.D. thesis is possible with the collective work done over the years and requires the support of various individuals. I would like to take this opportunity to express my gratitude to all those individuals I had the opportunity to interact with during my Ph.D.

Firstly, I would like to express my deepest gratitude to my thesis supervisor Prof. Brajesh Chandra Choudhary. He gave me the possibility of working in such a stimulating environment in the CMS Collaboration at CERN. His constant and overwhelming support, encouragement, advice and suggestions at every step during this tenure served as a guiding light for me. His expertise and experience in the field helped me in building a strong foundation of my research topic and made the path a lot easier. I learnt from him the significance of showcasing a professional attitude and systematic approach towards work. He was always there with his helpful and encouraging feedback, and always showed trust in me and provided me with various opportunities to work with experts in various international collaborations or participate in schools and conferences to present my results. It has been a pleasure to work with him during my Ph.D. and his guidance has certainly helped me grow into a better individual. It will be with me throughout my career and life.

I would also like to thank the CMS High Energy Physics group at University of Delhi headed by Prof. R. K. Shivpuri for providing me with all the necessary facilities and healthy environment to work and pursue my research. I am thankful to all the senior faculty members of the group Dr. Kirti Ranjan, Dr. Md. Naimuddin, Dr. Ashok Kumar and Dr. Ashutosh for all their valuable support during my Ph.D. tenure. I further express my gratitude to Dr. Satyaki Bhattacharya (an ex-member of University of Delhi) and Dr. Nivedita Deo who formed my Ph.D. advisory committee. Their constant suggestions and constructive feedback during my initial years of Ph.D. helped me in laying the basic building blocks for my research.

I am obliged to Prof. R. P. Tandon (Head, Department of Physics & Astrophysics)
for providing all the necessary facilities in the department.

I would also like to acknowledge the members of the India-CMS collaboration. Our continuous interaction during the collaboration meetings held every few months provided me with the necessary feedback, both positive and negative, and encouraged me to take a fresh approach everytime in understanding my results in a better way.

I indebted to the members of the CMS Collaboration with whom I got a chance to work and interact during the course of my Ph.D. I would like to specially thank the QCD group in the CMS Collaboration (now a part of the SMP group). My constant interaction with the QCD photons convenors over the years Prof. Susan Mary Gascon-Shotkin, Dr. Shin Shan Yu, Dr. Vasundhara Chetluru and Dr. Serguei Ganjour provided me with the necessary platform to work with the group. Prof. Susan has been a source of inspiration and has always shown keen interest in my work and provided me with careful guidance and support through our numerous discussions during my CERN visits and email-exchanges. I also got a chance to work with Dr. Vasundhara over the last few years. She constantly scrutinized the work and provided me with innumerous critiques and suggestions. The results presented in the thesis would not have been completed without her immense guidance and encouragement during the course of the analysis. I have been immensely benefited from interactions with her.

I would like to express my sincere thanks to everyone from the $\gamma+$jet analysis team, Dr. Vasundhara Chetluru, Dr. Bob Hirosky, Chuanzhe Lin, Dr. Darko Mekterovic and Kadir Ocalan. It was really a wonderful and enriching experience to work with them. Dr. Bob Hirosky provided with valuable inputs at every point in the analysis and I gained a lot from his knowledge and experience.

The work presented in the thesis would not have been possible without the collective effort of all the individuals associated with the CMS experiment and LHC. I would like to thank the whole CMS collaboration, the scientists, as well as technical and the administrative staff, at the LHC accelerator complex and the experiment. It was due to the team effort of all these people that the experiment was able to deliver and record really high
quality data with high efficiencies in such a record time.

I would also like to thank SHERPA authors, Dr. Frank Krauss and Dr. Stefan Hoeche for useful discussions regarding SHERPA predictions for the $\gamma$+jet measurement. Their regular prompt and continuous responses regarding my doubts or discussion of results enabled me to finalize the predictions quickly and efficiently. I also extend my gratitude to Dr. Stefan Gieseke of the Herwig++ Karlsruhe team who supervised me during the course of my MCnet studentship project.

I would like to express my sincere thanks to my senior colleagues Dr. Sushil Singh Chauhan and Dr. Pooja Gupta for providing continuous and valuable support during my initial years of Ph.D. Their continuous assistance in my work helped me to understand the basics of direct photons physics, C++ coding, and all the nitty-gritties involved in an analysis. I would further thank my colleagues at the EHEP group in University of Delhi for providing constant support and encouragement over these years. Our discussions both over physics and other general non-physics issues (I should say more of these) provided an open and friendly atmosphere in the lab. All my group members consisting of Sandhya Jain (Sandhya, thanks for being there through all my lows & highs over these years), Pooja Saxena, Shilpi Jain, Abhinav Dubey, Arun Saini, Ruchika Nayyar, Bhawna Gomber, Raman Khurana, Arun Kumar, Varun Sharma, Shivali Malhotra, Dr. Kavita Lalwani, Rocky Singla, Daljeet Kaur, Ajay Kumar, Ranjeet Dalal and Ramkrishna Sharma have been a source of inspiration and help during my research. I really enjoyed their company both at University of Delhi and during my stay at CERN. I will really miss the time spent in the group.

I would also like to thank the support staff in our lab. Mr. P.C. Gupta and Mr. G.D. Sharma who managed our CERN trips and all other official formalities and Ravi Mishra, Shashi Mishra, Yunus, Varun and Sanjay for all their continuous assistance in the lab.

This research was financially supported by a grant from the Department of Science and Technology (DST), Govt. of India and a fellowship from the Council and Scientific and Industrial Research (CSIR), Govt. of India, which are gratefully acknowledged.
Finally, I want to express my deepest gratitude and appreciation to my parents and my brother. They supported and took care of me through this journey. It was due to the inspiration from my father that I decided to pursue Ph.D. in the first place. I would not have come so far without your unconditional love, understanding, endless patience and a constant belief in my decisions. I owe everything to my family. Thanks for believing in me.

SUDHA AHUJA
