OBJECTIVES OF THE STUDY

To formulate and evaluate eatable dosage forms containing anticancer agents for dysphagia patients.

Specific objectives of the work are:

a. To select suitable anticancer agents (drug).

b. To select polymer and other excipients of natural/synthetic origin.

c. To carry out compatibility studies between the drug and the polymers/excipients.

d. To formulate, optimize and evaluate dosage forms such as fast disintegrating films, fast disintegrating tablets and eatable gels.

e. To carry out in vivo evaluation of the optimized dosage forms.

f. To study the stability of drug in optimized dosage forms.
