Research in common parlance refers to a search for knowledge. It is actually a voyage of discovery. The purpose of research is to discover answer to question through the application of scientific procedures. Research in every field and more so in the field of education is the need of the hour. Progress in every field is directly linked with research in the field. Our problems and difficulties in the field of education further necessitate a purposeful and sustained research effort.

Educational research is that activity which is directed towards the development of science of behaviour in educational situation. Although research carried out by the people of other places are helpful in many ways but we cannot always depend on them for solving problems faced in our system supported by our unique socio-cultural, economical, geographical and demographic environment. For this reason we need research about local issue by the local researcher.

The present study is local in nature. It is modest attempt to find the existing scenario of science education in the secondary schools of Tripura. The value of science is an important aspect of human life. But the present scenario about inculcation of science education among school students is not satisfactory enough. The present study entitled “A Critical Study of Science Education in the Secondary Schools of Tripura” is a humble attempt to find the existing situation of science education among secondary stage schools of Tripura in terms of some specific dimensions.
