List of Tables

Table 2.1: List of time series of |B| and Bz considered for this study, representing quiet periods and storm periods with date, time of storm sudden commencement (SSC), and maximum value of Dst during storm ................................................................. 57

Table 3.1: List of stations used in the analysis ......................................................... 105

Table 3.2: Details of the events with solar activity, D$_{st}$ max and SSC time in UT ................................................................. 106

Table 3.3: The yearly average values of Correlation coefficient between the geomagnetic field component H and interplanetary magnetic field Bz for five stations namely Pondicherry (PND), Visakapatnam (VSK), Alibag (ABG), Nagpur (NGP) and Ujjain (UJJ) under different solar active periods during storm time ................................................................. 128

Table 3.4: The yearly average value of Correlation coefficient between the geomagnetic field component H and interplanetary electric field IEF for five stations namely Pondicherry (PND), Visakapatnam (VSK), Alibag (ABG), Nagpur (NGP) and Ujjain (UJJ) under different solar active periods during storm time ................................................................. 128

Table 4.1: List of halo CME-SSC event pairs with date and time .................. 149

Table 5.1: List of storm events, with date, time of storm sudden commencement (SSC), and maximum value of D$_{st}$ during storm, considered for the regression analysis. Events marked with * are used for modeling ................................................................. 178
