LIST OF FIGURES

CHAPTER 1

Figure 1.1. Hall marks of cancer
Figure 1.2. Metabolic activation of benzo(a)pyrene and formation of DNA and protein adducts
Figure 1.3. Steps involved in lipid peroxidation
Figure 1.4. Mode of action of chemopreventive agents
Figure 1.5. Various functions of carotenoids
Figure 1.6. Macular carotenoids

CHAPTER 2

Figure 2.1. HPLC analysis of MZ synthesised from Marigold flower extract

CHAPTER 3

Figure 3.1. In vitro antioxidant activities of zeaxanthin and meso-zeaxanthin
Figure 3.2. Singlet oxygen quenching activities of zeaxanthin and meso-zeaxanthin
Figure 3.3. Effect of meso-zeaxanthin on carrageenan induced acute paw edema formation
Figure 3.4. Effect of meso-zeaxanthin on dextran induced acute paw edema formation
Figure 3.5. Effect of meso-zeaxanthin on formalin induced chronic paw edema formation
Figure 3.6. Effect of MZ on the expressions of TNF-α, iNOS and COX-2 genes in LPS-activated macrophages.

CHAPTER 4

Figure 4.1. Genotyping of tester strains

CHAPTER 5

Figure 5.1. Anti-tumor effect of meso-zeaxanthin on solid tumor induced by DLA cells
Figure 5.2. Apoptosis inducing effect of meso-zeaxanthin on DLA cells
(a) Morphological analysis
(b) Ladder formation
Figure 5.3. Effect of MZ on the expression of genes like Bcl-2 and p53.
Figure 5.4. Effect of MZ on the expression of genes like Caspase-3 and Caspase-9.

CHAPTER 6

Figure 6.1. Morphology of liver after NDEA induced hepatocellular carcinoma
Figure 6.2. Histopathological analysis of NDEA induced liver
Figure 6.3. Effect of MZ on 3-MC induced sarcoma
Figure 6.4. Effect of MZ on tumor incidence of mice treated with 3-MC
Figure 6.5. Effect of MZ on survival rate of mice bearing 3-MC induced sarcoma
Figure 6.6. Effect of MZ on DMBA and croton oil induced two-stage skin carcinogenesis in mice
Figure 6.7. Effect of MZ on tumor initiation during DMBA and croton oil induced two-stage skin papillomagenesis
(a) Number of animals developed papilloma
(b) Number of papilloma developed per mice
Figure 6.8. Effect of MZ on tumor promotion during DMBA and croton oil induced two-stage skin papillomagenesis
(a) Number of animals developed papilloma
(b) Number of papilloma developed per mice
Figure 6.9. Effect of MZ on phase I carcinogen metabolising enzymes in vitro
Figure 6.10. Effect of MZ on CYP450 enzyme activity in vivo
Figure 6.11. Effect of MZ administration on phase II enzymes

CHAPTER 7

Figure 7.1. Effect of MZ on serum marker enzymes during cisplatin induced nephrotoxicity
Figure 7.2. Histopathological analysis of cisplatin treated kidney
Figure 7.3. Effect of MZ on ECG alterations of rats during doxorubicin induced cardiotoxicity
Figure 7.4. Histopathological analysis of heart tissue of rats

CHAPTER 8

Figure 8.1. Effect of MZ on the survival rate of irradiated mice
Figure 8.2. Effect of MZ on γ-radiation induced body weight alterations of mice
Figure 8.3. Effect of MZ on total WBC count of irradiated mice 
Figure 8.4. Effect of MZ on bone marrow cellularity of irradiated mice 
Figure 8.5. Effect of MZ on α-esterase activity of irradiated mice 
Figure 8.6. Effect of MZ on lipid peroxidation levels of gastrointestinal systems of mice exposed to γ-radiation 
Figure 8.7. Histopathological analysis of small intestine of irradiated mice 
Figure 8.8. Effect of MZ administration on radiation induced micronuclei formation in mice bone marrow cells 
Figure 8.9. Effect of MZ administration on radiation induced chromosomal aberrations in mice bone marrow cells 
Figure 8.10. Effect of MZ administration on radiation induced DNA strand breaks (Comet Assay) 

CHAPTER 9 
Figure 9.1. Effect of MZ on hydroxy proline content of the ethanol induced fibrotic rats 
Figure 9.2. Histopathological analysis of rat liver

CHAPTER 10 
Figure 10.1. Various pharmacological properties exhibited by MZ
