LIST OF TABLES

Table 1.1  Fungal infections included in the 1993 AIDS surveillance case definition.
Table 1.2  Species commonly causing Candidiasis and its frequency
Table 1.3  Changes in the positions of top ten courtiers for estimated number of adults (in million) with diabetes in 1995 and 2025
Table 1.4  Reports of vulvovaginal candidiasis from Indian patients over the year (1961-2011).
Table 1.5  Antifungals and their mode of action.
Table 1.6  Antifungals and date of release for treatment of fungal infections.
Table 1.7  Molecular methods for epidemiologic fungal strains typing.
Table 2.1  List of laboratory strains and plasmids used in this study
Table 2.2.1  YEPD (Yeast Extract Peptone Dextrose)
Table 2.2.2  CMA (Corn Meal polysorbate Agar)
Table 2.2.3  TTC (Triphenyl tetrazolium chloride) SALT-SDA MEDIA
Table 2.2.4  SDA (Saboraud Dextrose Agar)
Table 2.2.5  Hi-Chrome Candida Differential Agar
Table 2.2.6  Luria Bertani Broth (LB)
Table 2.2.7  Drugs used in this study
Table 2.2.8  Preparation of RPMI-1640 MOPS media
Table 2.2.9  Buffers for agarose gel electrophoresis
Table 2.2.10  Mac. Farland Reagent
Table 2.3  MIC Breakpoints for various drugs used.
Table 2.4  List of the standard strains used as controls in this study obtained from American Type Clinical Collection (ATCC).
Table 2.5  List of primers used in this study
Table 3.1  Number of Candida colonies in positive cultures of test (n=82) and control groups (n=50)
Table 3.2  Results of identification of Candida species on Hi-Chrome Candida Agar medium of positive cultures for test (n=82) and control groups (n=50)
Table 3.3  Correlation of Candida species and microscopic findings of test group
Table 3.4  Correlation of Candida species and microscopic findings of control group
Table 4.1  Species distribution of Candida in women of different age groups.
Table 4.2 Signs/ symptoms of patients and their correlation to culture positivity (n =1050).

Table 4.3 Potential risk factors for vulvovaginal candidiasis.

Table 5.1 Characteristics feature and risk factors of neonates infected by Candida albicans or non-albicans Candida spp.

Table 5.2 Distribution of various Candida spp. isolated during different periods.

Table 6.1 Distribution of different Candida species with birth conditions, isolated from vaginal mucosa of 32 delivering mothers.

Table 6.2 Distribution of different Candida species with birth conditions, isolated from oral mucosa of 16 neonates from vaginal and caesarean births.

Table 6.3 Characterization of Candida isolated from 9 mothers and their corresponding neonates.

Table 7.1 Maternal and Infant Colonization (80 Mother–Infant Pairs).

Table 7.2 Factors associated with early (≤1 wk) neonatal C. albicans colonization.

Table 7.3 Factors Associated With Late (≤2 wk) Colonization in Infants.
