Chapter-1

GENERAL INTRODUCTION 1-49

1.1. History of Electron Transfer 5

1.2. Rate of Electron Transfer 7

1.3. The Theory of Charge-Transfer Complexes 12

1.4. Mulliken's Theory 14

1.5. Other Useful Theories of Charge Transfer Complexes 17

1.6. Multiple Charge-transfer Spectra 19

1.7. U.V. Visible Spectra 21

1.8. I.R. Spectroscopy 25

**1.9. Spectrophotometric Determination of Equilibrium constant
and molar absorptivity** 27

1.10. Determination of Equilibrium Constant by I.R Spectrometry 30

1.11. Some Recent Developments in Charge-Transfer Complexes 31

1.12. Hydrogen-Bonding 33

References 44

Chapter-2

**SPECTROPHOTOMETRIC STUDY OF THE CHARGE TRANSFER
COMPLEXATION OF PICRIC ACID (2, 4, 6 TRI NITRO PHENOL)
AS AN ELECTRON ACCEPTOR WITH P-NITROANILINE AS AN
ELECTRON DONOR** 50-82

2.1. Introduction 50

2.2. Chemistry of Picric acid 51

2.2.1	<i>History</i>	51
2.2.2	<i>Synthesis</i>	53
2.2.3	<i>Uses</i>	53
2.2.4	<i>Safety</i>	53
2.3.	Chemistry of p- nitroaniline	54
2.3.1	<i>Synthesis</i>	54
2.3.2	<i>Applications</i>	54
2.3.3	<i>Toxicity</i>	54
2.4.	Experimental	56
2.4.1	<i>Materials and Methods</i>	56
2.4.2	<i>Preparation of Standard Solutions</i>	56
2.4.3	<i>Synthesis of CT Complex</i>	56
2.4.4	<i>Reaction product from solution</i>	56
2.4.5	<i>Solid state reaction in capillary</i>	56
2.4.6	<i>Spectral measurements and determination of association Constant</i>	57
2.5.	Results and Discussion	59
2.5.1	<i>Observation of CT bands</i>	59
2.5.2	<i>Determination of oscillator strength (f) and transition dipole moment (μ_{EN})</i>	59
2.5.3	<i>Determination of resonance energy (R_N)</i>	66
2.5.4	<i>Determination of Ionization potentials of the donor</i>	66
2.5.5	<i>Determination of Standard free energy changes (ΔG^0) and energy (E_{CT}) of the π-π^* interaction between donor and acceptor</i>	66
2.5.6	<i>Spectrophotometric study of formation constants of the complex of PiOH with PNA in different polar solvents</i>	67
2.5.7	<i>Effect of solvents on the formation of CT- complex</i>	68

2.5.8	<i>Effect of solvents on the Standard free energy changes (ΔG^0) and ionization potentials (I_D) of donor</i>	73
2.5.9	<i>Comparative study of IR spectra of CT complex and reactants</i>	74
Conclusions		80
References		81
Chapter-3		
SPECTROPHOTOMETRIC AND SPECTROSCOPIC STUDIES OF CHARGE TRANSFER COMPLEXES OF M-NITROANILINE AS AN ELECTRON DONOR WITH PICRIC ACID AS AN ELECTRON ACCEPTOR IN DIFFERENT POLAR SOLVENTS		83-110
3.1.	Introduction	83
3.2.	Chemistry of m-nitroaniline	84
3.2.1	<i>Properties and Definitions</i>	84
3.2.2	<i>Overall Evaluation</i>	86
3.3.	Experimental	86
3.3.1	<i>Materials and Methods</i>	86
3.3.2	<i>Preparation of standard solutions</i>	86
3.3.3	<i>Synthesis of CT complex</i>	86
3.3.4	<i>Reaction product from solution</i>	90
3.3.5	<i>Solid state reaction in capillary (reactants in contact)</i>	90
3.3.6	<i>Observation of CT bands</i>	90
3.3.7	<i>Determination of Ionization potentials of the donor</i>	92
3.3.8	<i>Determination of oscillator strength (f) and transition dipole moment (μ_{EN})</i>	95

3.3.9	<i>Determination of resonance energy (R_N)</i>	95
3.3.10	<i>Determination of Standard free energy changes (ΔG^0) and energy (E_{CT}) of the π-π^* interaction between donor and acceptor</i>	96
3.4.	Result and Discussion	96
3.4.1	<i>Spectrophotometric study of formation constants of the charge transfer complexes of PiOH/MNA in different polar solvents</i>	96
3.4.2	<i>Effect of solvents on the formation of CT- complexes</i>	98
3.4.3	<i>Comparative study of FT- IR spectra of CT complex and reactants</i>	103
	Conclusions	108
	References	109
Chapter-4	SPECTROPHOTOMETRIC AND SPECTROSCOPIC STUDIES OF CHARGE TRANSFER COMPLEXES OF P-TOLUIDINE AS AN ELECTRON DONOR WITH PICRIC ACID AS AN ELECTRON ACCEPTOR IN DIFFERENT SOLVENTS	111-142
4.1.	Introduction	111
4.2.	Chemistry of p- toluidine	112
4.3.	Experimental	112
4.3.1	<i>Materials and Methods</i>	112
4.3.2	<i>Preparation of standard solutions</i>	114
4.4.	Results and Discussion	114
4.4.1	<i>Observation of CT bands</i>	114

4.4.2	<i>Determination of Ionization potentials of the donor</i>	118
4.4.3	<i>Determination of oscillator strength (f) and transition dipole moment (μ_{EN})</i>	121
4.4.4	<i>Determination of resonance energy (R_N)</i>	121
4.4.5	<i>Determination of Standard free energy changes (ΔG°) and transition energy (E_{CT}) of the π-π^* interaction between donor and acceptor</i>	122
4.4.6	<i>Spectrophotometric study of formation constants of the charge transfer complexes of PiOH/PTD in different solvents</i>	122
4.4.7	<i>Effect of solvents on the formation of CT- complexes</i>	123
4.4.8	<i>Comparative study of FT-IR spectra of CT complex and reactants</i>	130
4.4.9	<i>1H NMR Spectrum of complex</i>	136
	Conclusion	139
	References	140
	 Chapter-5	
	SPECTROPHOTOMETRIC AND SPECTROSCOPIC STUDIES OF CHARGE TRANSFER COMPLEXES OF 1-NAPHTHYLAMINE AS AN ELECTRON DONOR WITH PICRIC ACID AS AN ELECTRON ACCEPTOR IN DIFFERENT POLAR SOLVENTS	143-168
5.1.	Introduction	143
5.2.	Experimental	144
5.2.1	<i>Materials and Methods</i>	144

5.2.2	<i>Preparation of standard solutions</i>	144
5.2.3	<i>Synthesis of CT complex</i>	144
5.3.	Result and Discussion	144
5.3.1	<i>Observation of CT bands</i>	144
5.3.2	<i>Determination of Ionization potentials of the donor</i>	150
5.3.3	<i>Determination of oscillator strength (f) and transition dipole moment (μ_{EN})</i>	150
5.3.4	<i>Determination of resonance energy (R_N)</i>	153
5.3.5	<i>Determination of Standard free energy changes (ΔG^o) and energy (E_{CT}) of the π-π^* interaction between donor and acceptor</i>	153
5.3.6	<i>Spectrophotometric study of formation constants of the charge transfer complexes of PiOH/NPA in different polar solvents</i>	154
5.3.7	<i>Effect of solvents on the formation of CT- complexes</i>	155
5.3.8	<i>Comparative study of FTIR spectra of CT complex and reactants</i>	158
5.3.9	<i>1H NMR Spectrum of CT Complex</i>	161
	Conclusions	166
	References	167
