ACKNOWLEDGMENT

First and foremost, thanks to Almighty Allah, the all knowing, the most benevolent and merciful for blessing me with the strength and patience for the timely completion of this thesis. Without His help and support this work will never have been accomplished.

I am extremely grateful to my esteemed supervisor Dr. Subuhi Khan, Associate Professor, Department of Mathematics, Aligarh Muslim University, Aligarh, India, for her ever-present guidance, valuable suggestions, encouragement and infinite patience. Her sincere interests and breadth of knowledge in mathematics and kind heart have been a great inspiration to me. Despite her very busy schedule, she has spent uncountable hours for guiding my research, listening and answering problems I encountered and for providing constructive comments on this thesis. If it were not for her insightful comments, parts of this thesis would have been quite unreadable. And, if it were not for her creative drive and immense generosity, this thesis would have never been completed. I can not really find words that are good and strong enough to best thank her. The best I can say is that I am fortunate to have her as my supervisor.

I am thankful to Prof. Zafar Ahsan, Chairman, Department of Mathematics, Aligarh Muslim University, for providing me with all the possible facilities available in the department to carry out this work.

I would like to express my respect and profound sense of gratitude to Dr. Kaleem Raza Kazmi, Associate Professor, Department of Mathematics, Aligarh Muslim University, Aligarh, for being so kind, friendly and helpful. Whenever I need him, Dr. Kaleem is always there. I shall never forget his help and support forever.

I am also thankful to Prof. M.A. Pathan, former Chairman, Department of Mathematics, Aligarh Muslim University, Aligarh, for his encouragement and support.

I express my thanks to all my colleagues, especially to Dr. Ghazala Yasmin, Ms. Nusrat Raza and Mr. Shuja Haider for their continuous encouragement, fruitful discussions and moral support.
I would like to thank every member of the teaching and non-teaching staff of the Department of Mathematics, Aligarh Muslim University, for their amicable behavior and their endless cooperation during the course of this work.

I am deeply indebted to Dr. Maged Bin Saad, my supervisor while I was doing my Master degree at Aden University, Yemen. His moral support, advice and encouragement have helped me to pursue my Ph.D. study at Aligarh Muslim University.

My deep appreciation goes to Aden University, Yemen, for granting me this scholarship and for the generous sponsorship.

I would like to thank Dr. Mohammed Dabi and Dr. Salmeen Alaweid of Aden University, who helped me to get admission to Aligarh Muslim University.

I would also like to express my great gratitude to my colleagues, especially, Gamal Al-Dahbali, Adel Saeed, Essa Ajrah and Salem Barahmah. We shared a lot of good and hard times together here in Aligarh, India.

My whole life is highly indebted to the support and love of my family who have instilled in me the love of knowledge and learning. In fact, my dream is being realized with the encouragement and great support of my mother, sister and my brothers. Their courage, sacrifice and prayer to bring me up, influenced me and have been the source of my inspirations. My special thanks go to my wife, for her support and taking care of many responsibilities I should have been taking care of. Her courage, patience and strength to properly care for our daughters in my absence for years have been a great help to me. Pursuing my Ph.D. has kept me away from them for a long time. What makes me forgive myself is the fact that my better education will help give them a better quality of life and a better future.

Last but not least, I would like to thank all my friends and colleagues and those who have, directly or indirectly helped me in one way or another, space does not allow me to mention them. Many thanks to all of them.

Ahmed Ali Al-Gonah Saleh
