ACKNOWLEDGEMENTS

First of all, I would like to express my profound thanks to the ALMIGHTY for endowing me with good thoughts and for giving me the ability to carry out my research work devotionally.

Pursuing a Ph. D work is both a painful and an enjoyable experience. It’s just like climbing a high peak, step by step, accompanied with bitterness, hardships, frustration, encouragement and trust and with generous help of so many people. Many persons have contributed directly or indirectly in this endeavour.

The author wishes to express her deep sense of gratitude and indebtedness to her supervisor Dr. M. Ilyas Khan, Reader, Department of Psychology, Aligarh Muslim University, Aligarh, for his motivation, guidance, frank and constructive criticism and thought-provoking discussion. With out his invaluable contributions in various forms, it would not have been possible to present this thesis in its present form. His vast knowledge and logical way of thinking have been of great value for me. He stood by me during my difficult moments and provided unflinching encouragement and support in various ways.

Special thanks go to my co-supervisor Dr. Shadab A. Khan, Reader, Department of Medicine, JNMCH, Aligarh Muslim University, Aligarh, who is most responsible for helping me during the course of data collection. I gratefully acknowledge his timely assistance and crucial guidance, which are the bedrock of this research. Without his able supervision, a novice like me would not have been able to produce this work. During my Ph.D curriculum, I was able to interact with him on a routine basis, which helped me to learn many valuable things.

I owe my most sincere gratitude to Dr. Akbar Husain, Professor in Psychology, Aligarh Muslim University, Aligarh, who took keen interest in my research work and helped me a lot to conduct this study through his erudition and eminent guidance, whenever it was needed. His involvement and his originality have triggered and nourished my intellectual being from which I will benefit for a long time to come.
I would also like to express my profound gratitude to Dr. Hamida Ahmad, Professor and Chairperson, Department of Psychology, for her special advice, inspiration, constant encouragement, favorable attitude, and for providing the necessary research facilities to complete this work.

The author would also like to record her gratefulness to the other teachers of her department, for their constant encouragement.

I wish to make a special mention of my deepest gratitude to the prime mover behind this project-my respected father. His understanding and love encouraged me to work hard and to continue pursuing a Ph.D. His firm and kind hearted personality has taught me to be steadfast and never to bend to difficulty. He has always let it be known that he is proud of me, which has motivated me to work harder and do my best. Very special thanks are due to my brother Mr. Mohammad Aneeque for his constant belief in me even when I doubted myself. He always reminded me that my research should be useful and serve all mankind. My heart goes out to my sister Ms Nacema Haneef for giving me love, affection, and guidance.

Collective and individual acknowledgments and thanks are also owed to my colleagues especially Mr. Mohammad Akram and Mr. M. Faheem A. Ansari for their friendship and useful help which enabled me to present my research more fluently and clearly. I can not forget the sincere and generous cooperation extended by Mr. Mohammad Akram during the completion of this thesis.

Finally, the author wishes to express her gratefulness and extend her thanks to the invaluable assistance rendered by Mr. Aqeel Ahmad (SLA), Mr. Mohd. Tajuddin (SLA), Mr. Aftab Akhtar (LA), Mr. Shariq Ahmad (Seminar Librarian) and Mr. Majaz-ul-Haque, Department of psychology during the course of this research.
