

List of Figures

1.1	The density of states $g(E)$ versus E curve of bulk semiconductors and QDs.	6
1.2	Variation of band gap of QDs with size. The figure also shows variation from a band structure to discrete energy levels as the size of material decreases.	7
1.3	Illustration of the increase in surface area to volume ratio in QDs. . .	9
1.4	Illustration of the geometry of core-shell QDs covered by ligands. ²⁸ . .	10
1.5	Schematic representation of the energy band diagram and the electron (blue line) and hole (purple line) wave functions in type-I, type-I ^{1/2} and type-II systems.	12
2.1	La Mer Growth model of nucleation and growth stages in the preparation of monodisperse nanoparticles.	20
2.2	Photograph of the experimental set-up for the synthesis of QDs. . . .	21
2.3	Schematic of a UV-Visible-NIR spectrophotometer.	24
2.4	Schematic of a fluorescence spectrophotometer.	26
2.5	Schematic of TCSPC system.	27
2.6	Schematic diagram of Transmission Electron Microscope.	29
2.7	Schematic diagram showing the components of a X-ray photoelectron spectroscope.	31
2.8	Schematic of a typical XRD instrument.	33
2.9	Schematic representation of the working mechanism of EDS.	34
2.10	Schematic of the FE-SEM setup.	35

LIST OF FIGURES

2.11 Schematic of the ICP-AES setup.	37
3.1 Schematic of (a)charge transfer from CdSe-Cu ₂ Se core-shell QDs to methyl viologen (b) relative band edges of CdSe and Cu ₂ Se based on CV results.	39
3.2 Photograph of (a) pot mixture and (b) injection mixture.	42
3.3 Photograph of CdSe QDs and CdSe-Cu ₂ Se core-shell QDs under day light and UV excitation.	43
3.4 Normalized UV-Vis absorption spectra of CdSe (black colour) and CdSe-Cu ₂ Se (red colour) core-shell QDs.	44
3.5 Normalized emission spectra of CdSe (black colour) and CdSe-Cu ₂ Se (red colour) core-shell QDs.	44
3.6 Tauc plots for CdSe QD and CdSe-Cu ₂ Se QDs. Term n take values 1/2 and 2 for CdSe (direct band gap) and CdSe-Cu ₂ Se (indirect band gap) respectively.	45
3.7 (a) Absorption and (b) emission features of the CdSe QDs and CdSe-Cu ₂ Se core-shell QDs of different shell thicknesses.	46
3.8 Cyclic voltammogram (CV) of CdSe-Cu ₂ Se core-shell QDs.	47
3.9 Cyclic voltammograms (CVs) of CdSe and Cu ₂ Se QDs.	47
3.10 TEM image of CdSe QDs.	49
3.11 HRTEM images of CdSe-Cu ₂ Se core-shell QDs (Inset shows the SAED pattern).	49
3.12 EDS spectrum of CdSe-Cu ₂ Se core-shell QDs.	50
3.13 EDS spectrum of CdSe QDs.	50

LIST OF FIGURES

3.14	X-Ray Diffraction (XRD) patterns of CdSe and the corresponding CdSe-Cu ₂ Se core-shell QDs.	51
3.15	XPS Spectrum of CdSe QDs.	52
3.16	High resolution XPS spectra of (a) the core-shell QDs over the entire scan range (b) Cd 3d (c) Se 3d (d) Cu 2p.	53
3.17	Schematic picture showing the thermodynamic favorability of the electron transfer between QDs and MV ²⁺	54
3.18	Quenching in the PL intensity of CdSe-Cu ₂ Se core-shell QDs upon addition of methyl viologen (MV ²⁺). (Recorded in hexane and excited at 550 nm). Inset shows the corresponding absorption spectra.	54
3.19	Stern-Volmer plots for comparing PL quenching of CdSe (▲) and CdSe-Cu ₂ Se core-shell (●) QDs in presence of MV ²⁺ . Inset shows the corresponding TCSPC data (excited at 330 nm), showing little change in average life time.	56
4.1	Schematic representation of the energy level diagrams of CIS and In ₂ Se ₃	61
4.2	FTIR spectrum of oleylamine capped CIS- In ₂ Se ₃ QDs.	64
4.3	Absorption spectra of CIS-In ₂ Se ₃ QDs in chloroform (a d), with increasing CIS core sizes.	65
4.4	Absorption spectra of CIS QD and CIS-In ₂ Se ₃ QDs.	66
4.5	Tauc plots for CIS QD and CIS-In ₂ Se ₃ QDs. Term 'n' take values 1/2 and 2 for CIS (direct band gap) and CIS-In ₂ Se ₃ (indirect band gap) respectively.	66
4.6	Steady state emission spectra of CIS-In ₂ Se ₃ QDs and CIS QDs.	67

LIST OF FIGURES

4.9	High resolution TEM image of CIS- In_2Se_3 QDs. Inset shows its SAED pattern.	68
4.7	Cyclic voltammograms of CIS- In_2Se_3 QDs. Onset of oxidation peak appeared at 1.05 eV, corresponding to a HOMO level of -5.75 eV and reduction peak at -0.82, corresponding to a LUMO level of -3.88 eV. .	69
4.8	Cyclic voltammograms of CIS QDs. Onset of oxidation peak appeared at 1.09 eV, corresponding to a HOMO level of -5.79 eV and reduction peak at -0.865, corresponding to a LUMO level of -3.835 eV.	69
4.10	EDS spectrum of CIS- In_2Se_3 QDs.	70
4.11	EDS spectrum of CIS QDs.	70
4.12	High resolution XPS spectra of (a) Cu 2p (b) In 3d (c) S 2p and (d) Se 3d.	71
4.13	XPS Spectrum of CIS- In_2Se_3 QDs.	72
4.14	X-ray diffraction (XRD) pattern of CIS- In_2Se_3 QDs along with standard ICDD reference.	73
5.1	Photograph of ZnTe-ZnSe core-shell QDs under day light and UV excitation.	78
5.2	Representation of the relative band edges of ZnTe and ZnSe.	78
5.3	UV-Vis absorption (solid line) and emission spectra (dash line) of (a) ZnTe QDs and (b) ZnTe-ZnSe core-shell QDs.	79
5.4	High resolution TEM images of ZnTe-ZnSe core-shell QDs. Inset depicts SAED pattern of QDs.	80
5.5	X-Ray Diffraction (XRD) patterns of ZnTe-ZnSe core-shell QDs. . . .	81
5.6	EDS of ZnTe-ZnSe core-shell QDs.	81

LIST OF FIGURES

5.7	High resolution XPS spectra of (a) the core-shell QDs over the entire scan range (b) Zn 2p (c) Te 3d (d) Se 3d.	82
5.8	Effect of MV^{2+} on absorption (inset) and emission spectrum of ZnTe-ZnSe core-shell QDs.	84
5.9	Stern-Volmer plots for ZnTe-ZnSe core-shell QDs in presence of MV^{2+} . Inset shows the corresponding TCSPC data.	85
5.10	Energy level diagram of bulk ZnTe, ZnSe, ZnTe-ZnSe core-shell QDs and MV^{2+} . ¹⁴⁰	85
6.1	Schematic illustration of the charge transfer process in QDSSCs. . .	91
6.2	Photograph of TiO_2 coated fluorine doped tin oxide (FTO) glass and QD-sensitized TiO_2 film electrodes.	93
6.3	Top surface SEM image of QDs sensitized TiO_2 film.	95
6.4	Cross-sectional SEM image of QDs sensitized TiO_2 film.	95
6.5	TEM image of TiO_2 particles.	96
6.6	TEM image of QDs sensitized TiO_2	97
6.7	HRTEM image of QDs sensitized TiO_2	97
6.8	EDS spectrum of QDs sensitized TiO_2	98
6.9	J-V curves of QDSSCs fabricated with and without sintering.	99
6.10	Absorption spectra of the QDs sensitized photoanodes with and without sintering. (Inset shows the photoanodes (a)without sintering and (b) with sintering.)	99
