## Chapter 1: Introduction and Review of Literature

1.1 Neem for afforestation program  
1.2 Botanical description of Neem  
1.3 Importance of Neem from the environmental aspect  
1.4 Neem in Agro-forestry system  
1.5 Timber value of Neem  
1.6 Seed yield and return  
1.7 Economic and medicinal importance of Neem  
1.8 Production of Neem seedlings in forest nursery  
1.9 Mycorrhiza in plantation  
1.10 Signalling and initiation of symbiosis  
1.11 Life cycle  
1.12 Benefits of symbiosis  
1.13 Merits of AMF fortification in nursery  
1.14 Vermicompost in plantation  
1.15 Soil EC and AMF  
1.16 Soil nutrient analysis  
1.17 Objectives of this study

## Chapter 2: Materials and methods

2.1 Phase I  
2.1.1 Experimental site  
2.1.2 Plant material  
2.1.3 Fungal material  
2.1.4 Soil preparation  
2.1.5 Culture and inoculum production  
2.1.6 Seedling production  
2.1.7 Soil analysis  
2.1.8 AMF inoculation  
2.1.9 Data Collection  
2.1.10 Statistical analysis
## 2.2. Phase II

2.2.1. Site location and environmental variation 43
2.2.2. Field preparation 44
2.2.3. Soil analysis 44
2.2.4. Planting of seedlings 44
2.2.5. Data acquisition 45

## 2.3. Phase III

2.3.1. Study site 45
2.3.2. Soil analysis 45
2.3.3. Soil preparation 47
2.3.4. Seedling Production 47
2.3.5. Procurement and culture of inoculums 47
2.3.6. Production of vermicompost 49
2.3.7. Greenhouse experiment 49
2.3.8. Morphological and physiological studies 50
2.3.9. Biochemical analysis 51
2.3.6. Derived parameters 59
2.3.7. Fungal parameters 60
2.3.8. Statistical analysis 62

### Chapter 3: Image analysis for root length and leaf area estimation

3.1. Theoretical basis 66
3.2. Methodology 71
3.3. Performance test 76
3.4. Discussions 77

### Chapter 4: Result and discussions

4.1. Phase I 79
4.1.1. Soil analysis 79
4.1.2. Plant height and collar diameter 80
4.1.3. Plant biomass 82
4.1.4. Phosphorous concentration in leaves 83
4.1.5. Percentage root colonization and spore density 83
### 4.2. Phase II

- 4.2.1. Soil Analysis
- 4.2.2. Plant height and collar diameter
- 4.2.3. Chlorophyll content
- 4.2.4. Phosphorous concentration in leaves
- 4.2.5. Percentage Root Infection

### 4.3. Phase III

- 4.3.1. Soil Analysis
- 4.3.2. Plant height and leaf number
- 4.3.3. Collar diameter
- 4.3.4. Leaf area
- 4.3.5. Total root length
- 4.3.6. Tap Root length
- 4.3.7. Plant Biomass
- 4.3.8. Biochemical parameters
- 4.3.9. Chlorophyll content
- 4.3.10. Carotenoid
- 4.3.11. Total protein
- 4.3.12. Acid and alkaline phosphatase activity
- 4.3.13. Reducing sugars and total sugars
- 4.3.14. Nutrient analysis
- 4.3.15. Fungal parameters
- 4.3.16. Derived parameters
- 4.3.17. Regression analysis

---

**Chapter 5: Summary and conclusions**

**Bibliography**

**Appendix**

**List of presentations and publications**
