Acknowledgements

For initiating me into the minefield of drug related issues and healthcare, my gratitude goes to my supervisor, Prof. D. N Rao. I thank him for giving me the independence to chase up each new idea within the limits of science. This independence proved valuable in the course of this work.

Academic life at CESP was truly inspiring and I owe much to all the faculties at the centre. Rajaji, Bishiti and Bachi Singh at the CESP office made bureaucratic procedures easy, and I thank them.

I am grateful to Mr. Krayla of the National Working Group on Patent Laws, and Dr. Amit Sen Gupta of the Delhi Science Forum who generously shared with me crucial data at their disposal. I thank the Voluntary Health Association of India for going out of their way to make books and materials accessible. It is their help that makes this work a truly collective effort.

Friends far from the world of economics were always an important part of this effort. They helped sustain the will to complete this work with their critiques and suggestions. For always bringing politics to bear on academic work, I thank...com. Srini, com. Malini, com. Subbalakshmi, and additionally com. Srini for his untiring help in bringing this thesis to shape.

I thank com. Kavita, com. Parul and com. Shikha for making sense of what was initially a two-hundred odd page telegram, and had the same urgency.

In times when determination wavered Shubhra, Valli & family and Hansvir were always ready with material, emotional and moral support, and I thank them.

The third floor mafia – my neighbours – have been with this work since its inception, and have regarded it with the same trepidation. This work owes much to the good health and cheer they generated, and I thank, Shailish, Habib, Bala, Ravi, Pradip, Jaggu, Thiruna, Vikas, Raja, Wanki, Umakanth... etc.

Subbu, Brunu, Murali, Saikat, Sabyasachi and Suresh were a big academic help and shared a lot in terms of insights and references.

I thank Deepa from the institute of economic growth for helping me decipher through technical model.

This work owes a great deal to the experience of politics that this campus made possible, and to the experience – and by now the habit – of “taking a stand”.
