List of Tables

Table 2.1: Sampling stations for neretic squid collected onboard M.V. Sagarika and FORV Sagar Sampada.

Table 2.2: Instrumental parameters and concentration range of metals used in the determinations of various trace metals using Flame Atomic Absorption Spectrophotometer.

Table 3.1: Trace metal concentrations (Mean±S.D., Range, ppm wet wt) in the whole soft parts and body components of *L. duvauceli* collected off Cochin.

Table 3.2: Trace metal concentrations (Mean±S.D, Range, ppm wet wt) in the whole soft parts and body components of *L. duvauceli* collected off Quilon.

Table 3.3: Trace metal concentrations (Mean±S.D, Range, ppm wet wt) in the whole soft parts and body components of *L. duvauceli* collected off Mangalore.

Table 3.4: Trace metal concentrations (Mean±S.D, Range, ppm wet wt) in the whole soft parts and body components of *L. duvauceli* collected off Mumbai.

Table 3.5: Overall average levels of metals in whole soft parts and whole cleaned samples of *L. duvauceli*.

Table 3.6: Environmental contaminants, tolerances, action levels and guidance levels as per FDA and EU regulations.

Table 3.7: Analysis of variance (ANOVA) of heavy metals in muscle of *Loligo duvauceli* (Regional variation).

Table 3.8: Analysis of variance (ANOVA) of heavy metals in whole of *Loligo duvauceli* (Regional variation).
Table 4.1a: Distribution pattern of trace metals (Mean±S.D., Range, ppm wet wt) in the whole soft parts and body components of *L. duvauceli*, collected from Cochin region (premonsoon period: Jan.-May).

Table 4.1b: Distribution pattern of trace metals (Mean±S.D., Range, ppm wet wt) in the whole soft parts and body components of *L. duvauceli*, collected from Cochin region (monsoon period: Jun.-Aug).

Table 4.1c: Distribution pattern of trace metals (Mean±S.D., Range, ppm wet wt) in the whole soft parts and body components of *L. duvauceli*, collected from Cochin region (postmonsoon period: Sept.-Dec).

Table 4.2a: Distribution pattern of trace metals (Mean±S.D., Range, ppm wet wt) in the whole soft parts and body components of *L. duvauceli*, collected from Quilon (premonsoon period: Jan.-May).

Table 4.2b: Distribution pattern of trace metals (Mean±S.D., Range, ppm wet wt) in the whole soft parts and body components of *L. duvauceli*, collected from Quilon (monsoon period: Jun.-Aug.).

Table 4.2c: Distribution pattern of trace metals (Mean±S.D., Range, ppm wet wt) in the whole soft parts and body components of *L. duvauceli*, collected from Quilon region (postmonsoon period: Sept.-Dec.).

Table 4.3a: Distribution pattern of trace metals (Mean±S.D., Range, ppm wet wt) in the whole soft parts and body components of *L. duvauceli*, collected from Mangalore region (premonsoon period: Jan.-May.).
Table 4.3b: Distribution pattern of trace metals (Mean±S.D., Range, ppm wet wt) in the whole soft parts and body components of *L. duvauceli*, collected from Mangalore region (monsoon period: Jun.-Aug.).

Table 4.3c: Distribution pattern of trace metals (Mean ± S.D, Range, ppm wet wt) in the whole soft parts and body components of *L. duvauceli*, collected from Mangalore region (postmonsoon period: Sept.-Dec.).

Table 4.4: Analysis of variance (ANOVA) of seasonal variation of heavy metals in muscle of *Loligo duvauceli* from Cochin region.

Table 4.5: Analysis of variance (ANOVA) of seasonal variation of heavy metals in whole of *Loligo duvauceli* from Cochin region.

Table 4.6: Analysis of variance (ANOVA) of seasonal variation of heavy metals in muscle of *Loligo duvauceli* from Quilon region.

Table 4.7: Analysis of variance (ANOVA) of seasonal variation of heavy metals in whole of *Loligo duvauceli* from Quilon region.

Table 4.8: Analysis of variance (ANOVA) of seasonal variation of heavy metals in muscle of *Loligo duvauceli* from Mangalore region.

Table 4.9: Analysis of variance (ANOVA) of seasonal variation of heavy metals in whole of *Loligo duvauceli* from Mangalore region.

Table 5.1: Trace metal concentrations (Mean±S.D., Range, ppm wet wt) in the whole soft parts and body components of
neretic squids caught onboard MV Sagarika and FORV Sagar Sampada at 30-70m depth, off west coast of India.

Table 5.2: Trace metal concentrations (Mean±S.D., Range, ppm wet wt) in the whole soft parts and body components of oceanic squid caught onboard FORV Sagar Sampada at 200-350m depth, off west coast of India.

Table 6.1: Distribution pattern of heavy metals (Mean ± S.D., Range, ppm wet wt) in fishes separated from the mantle cavity of L. duvauceli collected off Cochin.

Table 6.2: Distribution pattern of heavy metals in fishes separated from the mantle cavity of oceanic squids (Ancistrocheirus spp.) caught onboard FORV Sagar Sampada (Cruise No. 191) during January 2001 at 200-350m depth.

Table 6.3: Distribution of heavy metals (Range, ppm, wet wt) in fishes caught in the same trawl net during May-June 1998 onboard the fishing vessel MV Sagarika from the west coast of India.

Table 6.4: ANOVA of significance after fitted regression between metal levels in L. duvauceli with metal levels in fishes separated from the mantle cavity.

Table 6.5: ANOVA of significance after fitted regression between metal levels in Ancistrocheirus spp. with metal levels in fishes separated from the mantle cavity.

Table 6.6: ANOVA of significance after fitted regression between metal levels in neretic squids with metal levels in fishes separated from same habitat area.
Table 6.7a: Trace metals concentration in water samples collected onboard MV Sagarika at 30-58m depth. (Range expressed in $\mu$g/L).

Table 6.7b: Trace metals concentration in water samples collected onboard FORV Sagar Sampada at 200-350m depth. (Range expressed in $\mu$g/L).

Table 7.1: Proximate and nutrient composition of feed for experimental Albino rats.

Table 7.2: Mean values of body weight of Albino rats fed with a diet containing Cd (squid liver) and CdCl$_2$ at 40 ppm.

Table 7.3: Metal concentrations in the body components of experimental Albino rats fed with a diet containing Cd (squid liver) and CdCl$_2$ at 40 ppm level for 6 weeks period (Mean±S.D., ppm wet wt).

Table 7.4: Haematological analysis of experimental Albino rats fed 40 ppm cadmium in the diet for 6 weeks.
