Acknowledgements

This is perhaps the easiest and hardest chapter that I have to write. It will be simple to name all the people that helped to get this done, but it will be tough to thank them enough. I will nonetheless try...

I express my heartfelt gratitude to my Supervisor, Prof. Rajendra Prasad. I could not have imagined having a better advisor and mentor for my Ph.D, and without his common-sense, knowledge, Management skills, perceptiveness and cracking-of-the-whip. The discussions, encouragement and critiques made by him were of essence to the progress of this work. Without his support and striving guidance it would have never reached the great results, I got in my thesis. Thanks a lot dear Sir for everything.

My special thanks to my co-supervisor Dr. Sneha Sudha Komath for all her valuable suggestion and guidance throughout the Ph.D tenure. She was actively involved in my work. Thank you for pushing me. Time after time, her easy grasp of Biophysics at its most fundamental level helped me in the struggle for my own understanding.

I also appreciate the guidance and space provided for me to work by Dr. Suresh V. Ambudkar in his lab at National Institute of health, in USA for 3 months.

I would like to acknowledge current dean, Prof. P. K. Yadav for providing excellent facilities in the School. I also appreciate the help rendered by Mr. B. A. Khan, Mr. A. C. Alexander, Mr. S. P. Sharma, Mr. S. K. Mishra, Rajendra, Asalam and Balwant of the Central Instrument Facility for extending their help in day to day work.

My thanks to University Grant Commission for providing by financial support in form of JRF and SRF.

Meenu Ma'am of SLS office deserves special mention for her friendly and caring attitude throughout my stay at SLS.

The road to my Ph.D degree has been long and winding, so I would also like to thank some people from the early days. My seniors Sneh, Kasturi, Neerja, Suneeet, Sudhakar, Ali, Nagendra, Naseem, Preeti, Nivedita and Tulika were among those who kept me going at the beginning. I would like to give my sincere thanks to my Senior Suneeet, Sudhakar and Preeti for teaching me the basics of the Molecular biology and Biochemistry. From the very early days, I feel a lasting gratitude toward loving Tulika, whom I watched go through this long before I did. She has been very affectionate and helping during the ups and downs of my Ph.D career. I would always remember the
time spent with my colleagues Dibyendu (angry young man heart broken), Sudhanshu
(ice cool Naranji) Ritu (Hot but yet very calm), Beautiful mind types Raman, My
funny smiling, always ready to help, Bioinformatician friend Manisha, my penguin
darling vivacious Nidhi, highly energetic Khyati, always singing and dancing lively
Hina, sincere Antresh, our Big B Saif, bhishun mishithi Sarmishtha, very cute always
smiling Monika and my beginner loving juniors Sanjeevani and Aieet. These pals at 101
made my stay memorable.

Manisha and Nidhi deserve special thanks for being extremely important to me while
I was writing thesis. Their untiring help while proof reading thesis, and for all the
corrections and revisions made to text that is about to be read. They have stayed with
me through out the process, and handled me and my sometime out-of-control emotions
as well. I pray to God for giving me enough supremacy to preserve their wonderful
friendship through out my life. Thanks a lot sweeties…..

My close friends, who are too many to mention (a thesis as page size maximum, guys)
always, stood by my side asking over and over again “When will you get it done? Next
week? Next Month? When.?"

In addition to the people in lab no 101, I have lucky enough to have the support of
many good friends. Life would not have been the same without my classmates, my
lunchmates loving, always helping Ruchi and mischievous Siddharth always provided a
healing touch and with my other ONLY-FUN friends Mohan, Himjyot, Sanjay, Gopal,
Manju, Parul and Nandini, always made me feel loved.

I shall remember all the help extended by Pratima and Shankar who provided
excellent computer support, Gagan, Vijay, Yadav ji, Sharma ji, Tikjal and Sukhendu
and their untiring efforts to make things easy to work in the lab.

I am also thankful to my loving and most caring room mate Tara, who not only
shared room with me but also shared my happiness and sorrows, and made me happy.
Tara thanks a lot for the love, care, patience and understanding offered by you.

Finally, I would like to thank those closest to me, whose presence helped make the
completion of my graduate work possible. These are Manisha Agrawal, my best friend
for the past 10 years, the most reliable friend one could have, Pooja, Kshitij and Chaity.

My final words go to my family and especially my parents, for their absolute
confidence in me. My parents always found a way of encouraging and pet me. But that
is what parents are for, right? (I don’t suppose mine knew what they were getting
themselves into nonetheless they managed to pull through and do what she could do best,
given the daughter in question). My brother Aman and sisters Nidhi and Megha, My
Didi Ritu and jiju Sanjay, these people with an irrational, unbreakable belief in me that bordered on craziness at time. My relationship with them goes beyond the common genes we share, and I, like every other human being needed their irrational support for me throughout my Ph.D tenure. I always feel immense pleasure and refreshed whenever I had word with my naughty and cute niece Pari, she has been source of joy during the hectic life of work.

I would like to thank Mrs. Usha Tatwani, she always compensated for my mother in her absence. Her affectionate behavior, regularly offered home made food and chatting session’s made me feel loved and special. Thanks a lot for being there for me.

I can not move on without my special words of thanks to my best pal, now would be better half Vikas for being most loving and understanding person in my life, patient enough to tolerate my bad temper, but above all for being with me and surviving the ordeal. He is paragon of love and care. He has been greatest moral support for me during my Ph.D tenure. The knowledge that he will always be there to pick up the pieces is what allows me to repeatedly risk getting shattered, kept me walking during the phase of dark. With all the ‘cells’ passing in this world it is a fortune that ours ‘collided.’

And lastly, it is only when one writes thesis that one realizes the true power of MS word, form grammar check to replace all. It is simple without software this thesis would not be written. Thank you Mr. Bill Gates and Microsoft Corp. Then it comes to my special thanks to my dearie IBM Laptop for being supporting without any technical hassle through out the process of preparation of Manuscripts of the Papers and thesis.

On a different note, I would like to thank the dhaba people of JNU for keeping me thinking and working, with late night servings of tea, bread omelets and parathas; Britannia biscuits (you have to ask why?) my only source of energy during the times of starvation.

I apologize to those whom I might have inadvertently forgotten to mention and acknowledge by name.

Last but not the least thanks to God’s Great Almighty, whose blessings helped me be what I am.....

Veera Rai
