Acknowledgement

This thesis has been an outcome of half a decade of research and several people have been instrumental in allowing the endeavour to be successful. It will be simple to name all the people who helped to get this done, but it will be tough to thank them enough. I will nonetheless try...

Foremost, I wish to thank my mentor Dr. Pradip K. Chakraborti, who has been supportive since the days I began working on the project. He always gave me moral support and freedom which I needed to move on. His commitment towards lab and dedication for research has been a constant source of inspiration for me. In addition, he took me on the process of learning, showed enormous patience throughout the period this endeavour lasted and made himself available despite his busy schedule. As a result, research life became smooth and rewarding for me despite the ups and downs. Thank you doesn't seem sufficient but it is said with appreciation and respect.

I owe my sincere gratitude to Dr. Amit Ghosh, former Director, IMTECH and Dr. Girish Sahni, present Director, IMTECH for providing excellent laboratory facilities and a healthy scientific environment. The contribution of Dr. Sahni in providing a new direction to the institute is extraordinary.

I would like to deeply thank Dr. Alok Mondal for his scientific advice mixed with a sense of humour. I appreciated his way of analyzing the problems and coming up with solutions. In addition, he was always accessible and willing to help.

I owe my gratitude to Dr. Purnananda Guptasarma for discussions at times and Dr. Subramanian Karthikeyan for his help whenever required. I gratefully acknowledge the support of Dr. Dibyendu Sarkar, Dr. Tapan Chakraborti, Dr. Pradip Sen, Dr. Manoj Raje and Dr. Rajagopal. I thank the entire staff of animal house facility of IMTECH especially Dr. Neeraj Khatri for the help in immunization and antibody generation during this period.

The journey can be partitioned into two phases. In the first phase, we are pampered like a new entry in the family and gradually we grow up and enter into the second phase where we shoulder responsibilities. Both the phases become memorable when we come across loving and caring persons. My labmates Rachna and Sangeeta pampered me in the initial phase. Special thanks are due to Rachna for her meticulous guidance during my early days. Rahul always helped whenever required and with the entry of Haider, I entered into the second phase. His attitude towards life, keenness to help those in need and dedication towards work has always impressed me. And with the entry of Pavitra and Payal, I became the eldest. While I admired the sincerity of Payal, the jollity of Pavitra and ever willingness to help brought a light hearted atmosphere in the lab. Jankiji provided excellent technical assistance whenever required. I owe thanks to late Amarjeet Ji for his help. Thanks are also due to Kanchan for helping with lab work. Renu wholeheartedly assisted in experimental work and also showed concern at times. I am also thankful to Jyotsna and Navdeep for their company in the lab.

Apart from lab, I was always amidst loving and caring seniors. Pratima always showed affection and the moments spent with her are really cherishable. Time spent with Vijaya, although less was glorious. Rekha di, Jagpreet and Srikanth provided a lively surrounding. Amrita, Saurabh, Sanjoy and Manoj also created an amusing environment.

This thesis gradually emerged amid the friendship of Anuradha and Suman, who were always there to listen to me. Needless to say, the time spent with them will be unforgettable. Sudesh always kindled a spirit of optimism with her magnificent smile and
Sukhi inspired with her perseverance. I want to express thanks to my batchmates Sudipto, Shubbir, Rohan, Vibhu, Ajit and Narinder.

I enjoyed the cheerful company of Jaspreeet, Rachna, Shilpi, Sushma, Puja, Loveena, Richa, Archana, Hardeep, Swati, Ranjana, Alpana especially during the B'day celebrations. I esteemed the confidence and cheerfulness of Rachna and simplicity of Shilpi. I relished the acquaintances with my juniors Sankalp, Joshi, Jannejay, Suhail, Arvind, Mitesh, Amit, Nigam, Akhilesh, Fazal and Satyaprakash.

I was lucky in being blessed with wonderful and caring roommates, Amita and Divya. Amita never treated me less than a younger sister and with Divya, the chirpiness gave me the sensation of an elder one. She always had concern for my feelings and care for my troubles.

I thank Deepak not only for help in sequencing, but also for his warm greetings upon each visit. The entry of Netrapal brought an additional and joyful dimension to the mission of life. His support was a strong driving force that kept goings smooth. I am grateful to Batra Ma'am and Gupta Ma'am for helping whenever required and Sharma Ma'am for her affection.

The cooperation and the kind of help rendered by the entire IMTECH family, BIC, Instrumentation, Administration, Store and Purchase section is truly acknowledged.

The contribution of mess workers Nagpalji, Ramlalji, Pratapji, Chandanji, Jacob and Vipin deserves a special mention.

I deservedly thank Dr. Anuradha Chakraborti for extending warm gesture in every meeting. I also cherished the conversations with Michelle and Guttu.

At this moment of pride, my deepest gratitude goes to my family for their unflagging love and support throughout my life; this dissertation is simply impossible without them. My parents had more faith in me than myself. I have no suitable word to describe their everlasting love for me, they are simply perfect. My brother, although behind the scene, remarkably contributed in this accomplishment. He used to endure all my pranks on long phone sessions, which drove me to work with enthusiasm. At the same time, his affection encouraged me and knowledge was always a source of inspiration.

Needless to say, the Almighty has blessed me with everything, what more could I have asked for!!! Thank You Lord!

The financial assistance provided by CSIR throughout my research tenure is duly acknowledged.
